The College of Humanities and Social and Behavioral Sciences will help you cultivate the understanding and skills necessary for living and working in a complex and changing world. You’ll develop:

- Strong writing and speaking skills
- Abilities to think clearly and critically
- Abilities to use technology in support of lifelong learning
- Familiarity with your intellectual and cultural heritages
- An understanding of social, psychological and political environments; and an appreciation of other peoples and cultures

Develop the critical thinking, research, analytical and communication skills that you’ll need to thrive in an ever-changing world in CMU’s College of Humanities and Social and Behavioral Sciences (CHSBS). CHSBS equips you with strong writing and speaking skills and the ability to recognize and make connections that lead to greater understanding of people and communities at the regional, national and international levels.

Academic programs include:
- Cultural and global studies
- English language and literature
- Foreign Languages, Literatures and Cultures
- History
- Military science and leadership
- Museum studies
- Neuroscience
- Philosophy and religion
- Political Science and Public Administration
- Psychology
- School of Public Service and Global Citizenship
- Sociology, anthropology and social work
- Women and gender studies

You’ll have opportunities to learn in research laboratories and libraries, at historical sites and through hands-on field assignments, internships, mentoring programs, service learning projects and study abroad programs.

Make a difference in your community
CHSBS graduates gain skills that they can apply to a diverse set of careers and graduate degrees. They use what they learn to serve their communities in roles as varied as teachers, lawyers, politicians, neurologists, counselors, writers, researchers and consultants. Many college alumni teach at K-12 schools, community colleges and universities across the globe.

Discover new ways to treat health conditions
As an undergraduate student, you’ll have opportunities to conduct research in specialized laboratories, such as with renowned neuroscientists and psychologists. College research goals include devising potential treatments for neurodegenerative diseases, particularly Huntington’s, Parkinson’s and Alzheimer’s diseases.

Specialty clinics within the college also offer students research endeavors in childhood ADHD, parent-child interaction therapy, violence reduction and trauma and anxiety disorders.

Engage with your neighbors
Many students actively participate in politics, civic engagement and mentoring activities through courses, internships, student organizations and service learning projects. Many students also work with community organizations, schools, government offices and social services institutions.

Explore other cultures
CHSBS students have opportunities to travel to foreign countries and learn new languages, study historical sites, observe international courts and uncover fossils and remnants of past societies. You can join special faculty-led international courses or complete a semester or year abroad at a foreign university in countries such as the Netherlands, United Kingdom, France, Germany, Italy and Chile.
