ALADDIN HOMES

THE ALADDIN COMPANY
MANUFACTURERS OF ALADDIN READI-CUT HOUSES
HOME OFFICES: BAY CITY MICHIGAN

W. J. SOVEREIGN, PRESIDENT
O. E. SOVEREIGN, TREAS & Genl MGR.

The Oldest and Largest Exclusive Manufacturers of Readi-Cut Houses in the World
World's Lowest Priced Quality Homes

THE ALADDIN COMPANY
Bay City, Mich., Portland Ore.

Dear Friend:

There are two vitally important factors about a new home. First in importance is Quality of Materials. Aladdin houses are built of Knotless Quality. No Quality can be higher.

Second — Price. We challenge anyone to meet our low freight-paid prices.

We will send you samples of materials free. We will convince you beyond question of big savings.

After you have selected the Aladdin House you like best you will want to know more about it than can be told in this catalog.

Write us — We will answer all questions, furnish you with samples of materials, give you estimates of time of erection and help you in every way possible so you will have a fine home at the very lowest cost.

We anticipate the pleasure of working with you to the end that your home will be completed in a way that is profitable, pleasurable and satisfactory to you.

Awaiting an early letter.

O.E. Sovereign
General Manager.

FACTS ABOUT ALADDIN HOMES

What Is an ALADDIN House?
When erected an Aladdin house is exactly the same as any well built house. There is no difference in the materials, no difference in sizes, grades or kinds.

It is assembled exactly the same, erected the same and finished the same.

What Is the Difference Then?
The difference is that you buy all your materials in one lot direct from the manufacturers, saving middlemen’s profits; and a further difference is that your lumber is cut to fit by modern, fast, accurate machinery instead of hand saws on the job saving you about a third of the labor and at least 18% lumber waste.

Why Do ALADDIN Houses Cost Less Money?
For exactly the same reason that Automobile Manufacturers can build a good, serviceable automobile so cheaply—big production and modern factory manufacturing methods. And for the further reason that Aladdin houses are sold direct to home builders—theone—no middlemen to add their profits to the price you pay. Also because Aladdin sells only for cash and you save the charges, costs and expenses the credit dealer adds to his price. Another reason is that this catalog is our only salesman. Aladdin has no agents and therefore nothing has been added to Aladdin prices to take care of agent’s commissions.

What Do You Get When You Buy an ALADDIN House?
The price quoted for each house in this catalog includes all the lumber cut to fit, all windows, doors, hardware, glass put in sash, paints, stains, varnishes, and complete drawings and instructions to make it easy to build—and we pay freight on the whole house.

How Long Have Readi-Cut Houses Been on the Market?
For twenty-five years. The Aladdin Company was first started twenty-four years ago by W. J. Sovereign, who originated the system, and O. E. Sovereign. Nearly a million readi-cut houses are standing throughout the world today. Aladdin houses have been purchased by the United States Government and many foreign governments, by great corporations and by thousands upon thousands of home builders. They have never failed to give the highest satisfaction.

What Is the Difference Between Readi-Cut and Portable?
A portable house is built in sections, of lighter materials, and bolted together. It can be unbolstered, taken down and moved elsewhere. That’s the reason for the name; it can be transported from place to place—hence “Portable.” A Readi-Cut House, being of standard construction, when erected cannot be taken down or taken apart, except as you would tear apart any other well built house.

Why Do Some Dealers and Contractors Talk Against Readi-Cut Houses?
Aladdin. YOU keep the profits in your own pocket that you would ordinarily pay to the local dealer. When your local dealer says: “Don’t buy your lumber out of town,” ask him where he buys the lumber he wants to sell you. You see he buys his lumber up here and the only money that stays in your town is his profit. Wouldn’t you rather have it in your pocket than in his? Many contractors don’t like Readi-Cut houses because they lower labor costs about a third. They therefore make less money building one.

Why Do We Sell for Cash Only?
Because we have found that we can be of greater service to the home builder, to you, by selling high quality materials for a low, cash price than we can by selling on Credit at a much higher price.

It is a fact that most people who buy on a Credit Payment Plan have to pay from one-quarter to one-third more than the Cash Buyer. That means the work and savings of three or four years paid out for nothing. Compare our cash prices with those offered by others who sell on a credit payment plan and you will find they are charging you heavily for the privilege. They have to do it.

The way to avoid these extra charges is to buy and build on a cash basis. If you do not have the cash on hand to pay for your home, borrow it from your bank or building and loan company and pay cash for your materials. The bank will charge you the regular rate of interest only. Your saving will amount to hundreds of dollars, the exact amount depending on the house you purchase.

How Will My ALADDIN House Be Shipped?
Your Aladdin house will be shipped to you freight paid from one of our own mills. It will be shipped complete in a sealed box car. Its safe arrival at your station in perfect condition is guaranteed by us. If anything should be missing or broken WE will immediately make it good. Your home will be shipped from one of our own mills, from Bay City, Michigan, or from Portland, Oregon, whichever mill is nearest to you.

Twenty Feet of Lumber From a Sixteen-Foot Board
Look at the picture to the left and you will see one of the ways we save your money by the Aladdin Readi-Cut System. You will learn that you do not buy good lumber to go in the waste pile, where so much of your material would go should you build by the old method. The lumber that’s
wasted costs just as much as the lumber that's used. Aladdin practices this and similar economies in cutting all materials, and these savings amount to more than eighteen percent—$18.00 out of every $100.00 saved! Factory planing and cutting saves waste—saves your money. You can build an Aladdin home in about half the time it takes to build a house that is not Readi-cut. Even though you decide to hire all the work done, you will make a big labor saving because so much of the work has been performed for you at our factory. Compare the time it takes a carpenter to measure, mark, saw and fit with the time required to nail a piece in position.

**What Kind of Lumber Will I Receive?**

Aladdin houses are built of the finest grades of lumber ever put into homes. The siding is clear and knotless, the flooring is clear and knotless, the interior woodwork is clear and knotless; the doors are all clear and knotless; the porch lumber is clear and knotless. The joists, studding, rafters and frame work are all sound, clean, straight and strong timbers. All materials furnished are thoroughly seasoned and of standard size. Aladdin Certified Lumber is guaranteed satisfactory.

**Can I Build My Own ALADDIN Home?**

Yes, with our simple easily understood drawings and instructions. Four out of five Aladdin customers build their own houses themselves or with the help of a handy man or carpenter. They thus save a big part of the money usually paid out for labor. Because the lumber is accurately cut to fit when you receive it, the expert knowledge of the carpenter is not needed. And also, because of that fact, the hard work of sawing and fitting is saved.

**Facts About the ALADDIN Company**

The Aladdin Company is incorporated for $2,000,000. It owns and operates three great manufacturing plants. They operate right at the edge of the greatest timber forests in the country. Every stockholder in The Aladdin Company is a worker in the business, interested in its success, interested in the success of its customers. The present officers and managers of the Company started it twenty-four years ago. This management has never changed. The Aladdin Company is the originator of the Readi-cut System of home construction.

**Masonry, Chimney and Fireplaces**

Chimneys can be located anywhere in the house you like, for we do not cut the materials for these openings. If you do not want the fireplace which may be shown in the photograph you need not build it. Brick, stone and cement can be had in your locality as cheaply as we could furnish it. We furnish you a foundation plan to tell you exactly how to proceed to build the kind of foundation you want.

**Plans Can Be Reversed**

Reversing plans means changing rooms to the opposite side of the house. That is, all rooms now on the right hand side will be on the left hand side and all rooms now on the left hand side would be on the right hand side. We can furnish all materials so your house can be reversed and will do so on request without extra charge.

**We Furnish Complete Blueprints**

Complete blueprints, a book of instructions and pictures showing every step in the erection of your home are furnished with every house, cottage or garage. Even though you are not a carpenter, these drawings will show you just how to do the work.

**Quick Shipment**

We can ship any regular house in this catalog within a week after receiving your order. However, we prefer to be given a little more time if convenient to you. Tell us when you want your house shipped when you send in your order.

**ALADDIN Guaranty**

Satisfaction or your money back is the strongest and soundest guaranty ever written. When this guaranty is backed by a Two Million Dollar Corporation you are assured of absolute safety in all your dealings. We only carry one quality and that is the best and whether you buy a large or small house you receive the same guaranteed quality.

**Terms**

Aladdin Homes, Summer Cottages and Garages are sold only for cash. The price quoted is for full cash with order. Or, if you desire, we will ship on receipt of one-fourth of the amount with order, the balance, plus a charge of $10.00, to be paid on arrival of materials at your station.

No cash is necessary with your order if you will enclose a letter from your bank or Building and Loan Association guaranteeing to us that the full amount of your order, plus a charge of $10.00, will be paid when the materials arrive at your station.

Also, we will ship without cash on receipt of a letter from your bank or Building and Loan Association stating that our money will be paid to us as construction progresses. Write for details.

**Freight Paid**

**Prices Subject To Change**

All prices quoted in this catalog are subject to advance on April 15th, July 5th, or Sept. 5th.

**References**

For references you may inquire of Dun's or Bradstreet's Commercial Agencies, The First National Bank, of Bay City, The First National Bank, of Portland, Oregon or any City official of these Cities, or write to our customers.

**Visit Our Mills**

If you live near enough to one of our mills we would welcome a visit to us. We will be glad to show you everything we furnish and give you all information you would like to have.
WASTE can and does influence the cost of everything you buy. This is especially true of home building.

Waste consumes your dollars and gives nothing in return. Aladdin proves to you that the Readi-cut System will save about $18 out of each $100 on your lumber costs.

Aladdin proves to you that the Readi-cut System will save you about $30 out of each $100 labor cost.

When the customer buys direct from the manufacturer there are no middlemen's costs and profits in the price he pays.

You can buy your house direct from the manufacturer. You can save the costs and profits of middlemen. You can save from $200 to $1,000 on the materials. This is your good money that would otherwise go into the pockets of middlemen.

Why shouldn't you save these profits, like thousands of other homebuilders have been doing through The Aladdin Company for the past twenty-five years?

Aladdin houses are sold direct. No dealers' or jobbers' profits in the price you pay. No financing charges. We sell for cash only.

You KNOW in advance what the materials for your house will cost you. You KNOW there will be no shortage of materials—nothing forgotten. You KNOW you will not be paying for more materials than will be used and that you will save the price of all "short ends" that are wasted by the old system.

You KNOW you will receive high grade lumber, millwork, hardware—Aladdin CERTIFIED materials. You KNOW everything will be on hand when you want it—all in one shipment and all guaranteed by Aladdin. And you KNOW in advance what your house will look like and what it will be in every way.

KNOWING gives you control—mastery of your money, of materials, of labor and of RESULTS.

Buying an Aladdin Home is the safest, easiest and wisest way to build.

Aladdin houses are sold from this catalog and built in every State in the Union. Varying weather conditions and the personal needs of the builder can easily be met by us with such changes in our specifications as you may wish.

To make it easy for you to order just what you want to buy we give you separate prices in this catalog on sub-flooring and wall sheathing, porches, lath, asphalt shingles, closet doors, cellar windows, kitchen cupboards, etc. If other changes in our specifications are desired, we will be glad to have you write us about them.

More than half of our houses are sold just as specified on Page 7, without any additional materials or equipment being included. If you purchase your home in accordance with these specifications, you will receive a good, strong, satisfactory home.

This catalog is our only salesman. Your letters to us and our replies to you easily explain everything you want to know. Read the catalog and write us today.

General Specifications

The Aladdin Company guarantees to furnish a sufficient quantity of materials to complete your home in accordance with the specifications listed below.

Sizes of Materials
All sizes of all material will be in accordance with well established engineering and architectural standards of safety and strength.

Quality of Materials
All lumber is guaranteed to be of high quality—in fact, higher than is customarily used. Only Aladdin Certified Materials are furnished. Every Aladdin house, regardless of size or price, comes under this guarantee.

Girders
Built-up of 2” material to size specified on page showing house.

Wall Plates
2” x 6” foundation wall plates furnished when solid wall foundation is to be used.

Floor Joists
Spaced on 16” centers. All joists are dressed and cut to fit. Size of joist specified on page showing house.

Bridging
Furnished mitered ready to nail in place for all joists 2” x 8” or larger.

Studding
For walls and partitions, 2” x 4” placed on 16” centers, selected for quality. All walls and partitions have top and bottom plates which is the approved type of construction in accordance with engineering standards and good practice. All studding cut to exact length ready to be nailed in place.

Ceiling Joists
2” x 4” on 16” centers. Selected quality, dressed and cut to exact length, ends mitered ready to nail in place.

Rafters
Placed on 24” centers. All rafters perfectly mitered and cut to fit. Size of rafters specified on page showing house.

Flooring
The flooring used in Aladdin homes is Clear and Knotless, tongued and grooved, accurately matched. It is 5⁄8-inch thick with a 23⁄4-inch face, machined to give a beautiful finish.

Siding
Clear and Knotless bevel siding. Aladdin Certified Quality. Cedar Shingles for side walls instead of siding can be furnished without extra charge when wall sheathing is used.

Roof Sheathing
Inch lumber to be laid tight. All sheathing dressed, cut to exact length and ready to nail in place.

Roll Roofing or Strip Shingles
Made of heavy weight felt base, saturated with asphalt and surfaced with natural green slate firmly imbedded in the heavy water proof base. Some of the houses are priced with strip shingles, others with roll roofing. If roll roofing is regularly supplied and you desire strip shingles the price will be found quoted on the page showing the house in which you are interested.

Wall Sheathing

Sub-Floor Sheathing and Building Paper
All wall and sub-floor sheathing inch lumber dressed and cut to exact length, ready to nail in place. Building paper of highest quality. Water or dampness cannot penetrate this insulation and it has the further advantage of being wind and vermin proof. Furnished at the price quoted for these items on the page showing house.

Outside Finish
Such as corner boards, water table, frieze, casings, moldings, etc., manufactured of Clear and Knotless stock.

Window and Door Frames
Complete including jams, stops, inside and outside trim. Manufactured of finest Knotless stock, bundled ready to assemble.

Window Sash
Manufactured of Knotless stock. Glass is in sash ready to hang. Windows catchrail type, size of glass in each sash 26” x 24” or 26” x 25” depending on height of ceilings. Top sash divided lights when shown in illustration. Kitchen and bathroom windows are usually smaller to permit placing kitchen or bathroom fixtures beneath them.

Doors
All doors are of the best quality, perfect in every way and, of course, Knotless. The outside doors have the glass placed in them ready to hang. The inside doors are of a two-panel design. All panels are selected for beautiful grain. When they have been stained and varnished you will agree that nothing finer could be furnished. Door linings are 5⁄8” grade by 6⁄8” high. Doors are mortised to receive lock sets. See prices on closet doors on Page 51.

Interior
6” baseboard, base shoe, two member trim

Woodwork
for all doors and windows. Clear and Knotless stock. Perfectly machined ready to receive the stain and varnish we furnish.

Main Stairs
Built-in selected Clear and Knotless stock with special attention to selection of grain. All parts of stairs are framed, housed and machined to fit and the whole is carefully boxed by itself to insure arrival in perfect condition.

Cellar Stairs
Cellar stairs are furnished when shown on floor plans.

Wood Lath
Will be supplied for walls and ceilings at price quoted on page showing house. Plaster is not included.

Shutters or Blinds
Furnished where shown in picture of house.

Paints—Stains
Two coats furnished. We have used unusual care in the manufacture of our paints, for the appearance of a house depends to a great extent upon the quality of the paint. We want every Aladdin house to look its best, therefore we use the best paint. The same care has been exercised in selecting the stain and varnish that is supplied for the interior woodwork and doors.

Lock Sets
Frosted brass finish, mortised lock sets and 31⁄2” hinges for all doors.

Hardware
Nails of all sizes in proper amounts to complete the house, sash cord, weights, pulleys and sash locks for all sliding sash windows, casement locks and hinges for swinging windows and double acting floor hinges for door between dining-room and kitchen.

Curved Arches
A curved arch can be furnished in place of any cased opening in any Aladdin home if desired, without extra charge. Each standard arch is shown in interior view of the “Virginia” on Page 4.

Blueprints
Complete blueprints showing every step of erection are furnished with every order so that even though you may not be a carpenter, you will know just how to erect your home.

Instructions
A book of instructions for the erection of your Aladdin home is furnished with each order. This book, together with the complete set of Construction Drawings, is mailed to you immediately on receipt of your order, reaching you considerably in advance of the materials. Opportunity is thus provided for you to become entirely familiar with the construction before erection starts. A foundation plan accompanies the Construction Drawings so that this part of the work can be started immediately, and your foundation made ready to receive the house, as soon as the materials arrive. This eliminates all delays. Many short-cuts and time and labor saving methods are explained in our book, enabling you to make great savings in time and construction costs.

Our Book of Instructions and Drawings are not for sale and are furnished free of charge.

Freight Paid
Prices quoted are freight-paid to your station. (See freight paragraph Page 4.)

Reversing Plans
Plans can be reversed without charge. This will place all rooms on opposite side of house from that shown in our catalog. Kindly mention when ordering if this change is desired.

Room Sizes
Figured from outside of walls to center of fixtures.

Note—See Page 51.
The Hawthorne is a fine example of the average American home. It is ideal in size, perfect in proportion—and the price is astonishingly low. All materials are of our certified high qualities. Always remember that Aladdin guarantees that you will have sufficient material to complete your house as stated in our specifications. And this guarantee also covers safe arrival of all material in perfect condition. A noteworthy feature of the Hawthorne home is that every bedroom in all five plans is provided with a closet. A door frame is provided for each closet opening but the door itself is not included. The numerous requests we have received for the omission of closet doors have induced us not to include them in our specifications. The openings can be artistically draped, adding color and attractiveness to the interior of the home and at the same time an economy is effected. However, if you wish doors on the closets of your home, you can purchase them separately at $5.50 each, including hardware, as described on Page 51. The 22' x 8' porch shown in the illustration is priced separately to permit you omitting it or selecting some one of our other porches, if you prefer. If desired, the porch columns can be furnished to extend down to the porch floor, making the cement block piers unnecessary. With the Hawthorne home you receive 6' x 6' built-up girders, 2' x 8' floor joists on 16-inch centers and 2' x 6' rafters on 24-inch centers. Ceiling height 8 feet. The roof has a one-quarter pitch. See complete specifications printed on Page 7.

22'x8' Porch: 135

Sub-Flooring, Wall Sheathing and Building Paper: 131
Wood Lath: 66
Asphalt Strip Shingles in place of Roll Roofing: 50
THE MADISON — A True American Home — $910

It would be hard to find a more charming home than the Madison. The roof lines are especially well proportioned. Many letters have been received from enthusiastic owners of this lovely home. It can be purchased in your choice of three different sizes and plan arrangements. The prices quoted are for siding on the exterior. If you wish to use shingles on the outside walls as shown in the illustration, it will be necessary to use wall sheathing under them. See quotations below for wall sheathing, sub-flooring and building paper. If you use wall sheathing you can have your choice of siding or shingles for the outside walls. An interior view of the Madison is shown at the top of Page 5. With the Madison home you receive 6" x 8" built-up girders, 2" x 8" floor joists on 16" centers and 2" x 6" rafters on 24" centers. Ceiling height 8'/2". The roof has a one-third pitch. Asphalt strip shingles are furnished for the roof at the quoted prices. See complete specifications on Page 7.

The Construction Used in an ALADDIN HOME Is the Same as That Used in the Best Architect-Designed, Contractor-Built House Erected Anywhere

SAVE WASTE
SAVE TIME
SAVE MONEY

Plan "C" is size 29 x 24 feet over all. A wonderful 22-foot living room and large dining room feature this plan.

Plan D:
A beautiful three bedroom home, size 42 x 24 feet over all. Many buyers tell us they have saved a good thousand dollars or more on this house.
THE CORONADO—A Thoroughbred—$1555 And We Pay The Freight

The Coronado is a thoroughbred—a typical American bungalow. The very essence of American architecture makes up its attractive lines. The sunny South is portrayed in the spacious porch, the West in the beautiful California pergola, the East receives credit for the interior of the home, while the North has loaned the shingled side walls representing Northern homes in the early days of American history. The high grade materials we furnish will do credit to this beautiful bungalow, such as the Knotless siding or shingles for exterior walls, Knotless outside finish, Knotless flooring, Knotless interior trim, beautifully grained two panel interior doors and artistic front door with three-quarter length glass. It is priced with siding on the outside walls. If shingles for the walls are desired they can be furnished without additional cost providing you are using wall sheathing beneath them. The Coronado is offered in two different sizes, enabling you to build this beautiful home in a size that will take care of your requirements. Both plans are alike in general arrangement. Three roomy bedrooms are obtained, each with a convenient clothes closet. The bathroom is centrally located between the middle and rear bedrooms. Plan No. 2 in addition to all the rooms of the No. 1 plan, gives a modern breakfast room of ideal proportions. It is accessible from both the kitchen and the dining room. Lighted on three sides, its cheery atmosphere will probably mean that its usefulness will not be confined to the morning meal. The porch shown on the plan is included. The pergola rafters shown at the rear end of the porch in the Number Two Plan are not included with the Number One Plan. The picture of the Coronado shows a cobble stone fireplace chimney in the end wall of the living room. The cobble stones give a very pleasing rustic effect but if cobble stones cannot be obtained in your vicinity at a reasonable price, you can build the chimney of brick. The same is true of the porch piers. You should also remember that even when fireplaces are shown in Aladdin homes, it is not necessary that you build them. We do not cut the openings for chimneys or fireplaces in any of our houses. With the Coronado you receive 6' x 8' built-up girders and 2' x 10' floor joists on 16-inch centers. No. 1 plan is provided with 2' x 4' ceiling joists on 16-inch centers. No. 2 plan is provided with 2' x 6' ceiling joists on 16-inch centers. Both plans are furnished with 2' x 6' rafters on 24-inch centers. Ceiling height 9 feet. Roof one-sixth pitch. Asphalt strip shingles included for roof. Eaves projection No. 1 plan, 26'; No. 2 plan 30'. See complete specifications on Page 7.
The one word "Different" best describes the Honeymoon home. It is different in style, exterior treatment and arrangement. Distinctive touches add decorative features not found in the usual home. The Honeymoon is furnished with an 8-foot ceiling. This ceiling height prevails throughout all the rooms with the exception of the living room. The living room has a ceiling height of 10 feet at the maximum, but drops to a 7-foot height at the side walls. This ceiling arrangement is being extensively used in many modern homes and is sometimes referred to as the "Studio" type of ceiling. The fireplace chimney is another noteworthy feature, particularly in the unusual treatment that has been used to embellish it. Of course, the fireplace need not be built unless desired. The Honeymoon is pictured with white stucco on the outside walls. The white walls and the dark trim provide a color treatment that is largely responsible for the attractiveness of the home. The same color effect can be obtained by using siding on the outside walls and selecting white paint for the siding and a dark paint for the trim. For this reason, we price the Honeymoon with siding on the outside walls, the same as our other homes. If you wish to stucco the exterior, we will omit the siding and body paint, furnishing wall sheathing, sheathing nails, and lath nails for the exterior, at no difference in price. The exterior construction will then be ready for stucco which you can obtain locally. The Honeymoon is shown in two different plan arrangements, Plan A being pictured above. Both arrangements provide all the facilities of the modern home and more conveniences than are usually included in a house of this size. Consider Plan A for a moment. The front entrance leads to a 7' x 6' hall. To the left of the hall a curved arch leads into the attractive studio type living room. To the right a curved arch leads to a 9' x 10' dinette, or dining room. To the rear of the dining room is a kitchen of just the proper size and proportions to permit a compact arrangement of kitchen furniture and fixtures. Returning again to the front hall, a third curved arch at the rear leads to a smaller hall from which the bedroom, bath and a roomy coat closet are accessible. Plan B is designed for those who need larger rooms and two sleeping rooms. The bedrooms and bath of this plan are entirely isolated from the living quarters of the home, being connected with the dining room by means of a hall. This is a very fine arrangement that actually gives two-story privacy in this one-story home. With the Honeymoon you receive 6' x 6' built-up girders and 2' x 8' floor joists on 16-inch centers. The rafters of Plan A are 2' x 4' on 24-inch centers. The rafters of Plan B are 2' x 6' on 24-inch centers. Asphalt strip shingles are furnished for the roof. See complete specifications on Page 7.
THE POPLAR—A Quaint Colonial Bungalow—$891 And We Pay The Freight

A true Colonial atmosphere is present in the design of this delightful bungalow. You will be proud of the genuinely honest construction, sturdy timbers and beautiful interior woodwork. Originality is expressed in the roof lines with hooded gables. Exposed rafter ends lend a touch of individuality while the general proportions of the structure are most harmonious. Four plans of the Poplar are shown below. In some of the plans a door is shown in the side of the living room in order to give access to the pergola porch. In other plans a window is shown. In any of the plans you can have either a door or a window depending upon whether or not you wish to order the pergola porch. There is no charge for this change from door to window or window to door. The 14' x 8' pergola porch has weather tight roof. It is priced separately below so it can be purchased with your home or not, as you prefer. When the width of the building lot prevents using the porch at the side of the house as pictured, it is often built on to the front of the house. This arrangement also provides a very attractive appearance. With the Poplar home you receive 6' x 6' built-up girders, 2" x 8" floor joists on 16" centers and 2" x 6" rafters on 24" centers. Ceiling height 8 feet. The roof has a one-quarter pitch.

THE MAGNOLIA—A Story and a Half Home—$843 And We Pay The Freight

The Magnolia is of the popular story and a half type of home. Three different first floor plan arrangements are obtainable. The second floor plan is the same for all three plans. Some of our customers who select first floor plan B and do not require the bath room, use the bath room for a dining alcove or omit the bath room entirely, adding its space to the kitchen. The Magnolia plan C provides for a living room, kitchen and bedroom on the first floor, no dining room being included. Many of our customers wish to use the kitchen for a dining room and the bedroom for a kitchen. We then place the outside rear door in the rear wall of the bedroom and provide a cased arch in place of the door between the living room and new dining room, including an extra window for the rear wall of the dining room, all at no charge. If you wish us to make this change for you it is only necessary that you mention it when ordering. The 20' x 8' porch is priced separately for your convenience. It can be purchased or not, as you prefer. The wooden columns of the porch can be furnished to extend down to the porch floor if desired, making the brick piers unnecessary. With the Magnolia home you receive 6' x 6' built-up girders, 2' x 8' first and second floor joists on 16-inch centers and 2' x 4' rafters on 24-inch centers. Ceiling height 8 feet first floor. See sketch at right showing second floor ceiling heights. The roof has a one-quarter pitch. See complete specifications printed on Page 7.

Three Ways You Can Order an Aladdin Home Without Full Cash

The prices quoted in this catalog are for full cash with order. But if you desire, we will ship on receipt of one-fourth of the amount with order, the balance, plus a charge of $10.00 to be paid on arrival of materials at your station.

No cash is necessary with your order if you will enclose a letter from your bank or Building and Loan Association guaranteeing to us that the full amount of your order, plus a charge of $10.00, will be paid when the materials arrive at your station.

Also, we will ship without cash on receipt of a letter from your bank or Building and Loan Association stating that our money will be paid to us as construction progresses. Write for details.
The Dayton
A Prize Winner
$838
And We Pay The Freight
Aladdin’s
Readi-Cut
System Saves 18% of Usual
Lumber Waste

There is something remarkably home-like in this prize-winning design, the Dayton. It is particularly attractive in the brown side wall coloring and pure white trim, shown in the two illustrations. Of course, any color combination you prefer can be used. The Dayton is priced with siding on the outside walls but it can be furnished with Cedar shingles for the sills, if preferred, at no additional cost providing you are purchasing wall sheathing with your home as priced below. The 13’ x 8’ porch is also priced separately below. If desired with wooden columns extending down to the porch floor, it can be so furnished at no difference in price. With the Dayton home you receive 6” x 6” built-up sills, 2” x 8” floor joists on 16-inch centers and 2” x 4” rafters on 24-inch centers. Ceiling height 8 feet. The roof has a one-quarter pitch. See complete specifications printed on Page 7.

A Letter From New York State
Dear Sirs—
I am delighted with my Norwood house. It is all I anticipated and is one of the best homes if not the best, on Seneca Drive. This is the second Aladdin house I have purchased. I hope to give you another order for another house in a year or two. I believe I am saving about $1000 by purchasing this house from you. You are doing a good business for the general public in the house building industry.

Complete address on request.

The Oakwood—Sure to Please—$552 And We Pay The Freight

Here is as pretty a home as you will find anywhere—modern in design and attractive in appearance. There are four plans of the Oakwood, all different in size and arrangement. In plan A of the Oakwood, the bath room would provide a roomy pantry, opening off from the kitchen, if the bath room is not desired. In plan B, the middle bedroom could be reduced in size and used for a bath room if desired. In this way the other two bedrooms could be increased in size, or closets added, as preferred. In plan C the bath room can also be converted into a pantry if this change is wanted. Write us for further information concerning these or similar changes in plan arrangements. Since the Oakwood home is designed in pure Colonial architecture, the eave construction conforms to that style. The eaves of the Oakwood home are boxed and return straight to the walls of the house, adding much to the attractiveness of the exterior. With the Oakwood home you receive 6' x 6' built-up girders. The Oakwood plan A, B and C are provided with 2' x 6' floor joists on 16-inch centers. Plan K is provided with 2' x 8' floor joists on 16-inch centers. All rafters are 2' x 4' on 24-inch centers. Ceiling height 8 feet. The roof has a one-quarter pitch. See complete specifications printed on Page 7.

The Oakwood Plan "K" is the inclusion of a cellar stairs. If not wanted the space can be converted into a pantry.
THE CYPRESS—Economical to Buy, to Build and to Live In—$483—And We Pay The Freight

Here is a real gem of a home. Thousands of them have been built and they always prove satisfactory. Six different plans offer a large choice in room arrangement. Choose the one that meets your needs. Any one of these can be erected by inexperienced men easily and rapidly. We guarantee the material, guarantee safe arrival and guarantee you will be satisfied. You take no risk.

The porch is 16 ft. wide, 6 ft. deep and is priced separate from the house so it can be ordered or left off or some other porch ordered in its place. Our desire is to make it easy for you to order just what you want. If you want more information before sending your order we will be glad to hear from you and answer any questions. The Cypress is furnished with 6" x 6" built-up girders, 2" x 6" floor joists on 16-inch centers and 2" x 4" rafters on 24-inch centers. Ceiling height 8 feet. The roof has a one-quarter pitch. See complete specifications printed on Page 7.

PLAN A
A great big living room is shown in this plan, together with two bedrooms, nice kitchen and bathroom.

PLAN B
The rooms in Plan "B" are proportioned differently although of the same accommodations as shown in Plan "A."

PLAN C
Notice the arch between the living room and dining room; also double window on side of living room.

PLAN D
Inside cellar stairs distinguish this plan. Every inch of space is used to good advantage.

PLAN E
Fewer rooms but bigger ones give this plan special attraction to many customers. Note the two big closets.

PLAN F
This is a one bedroom plan for a small family. All rooms are generous in size and well laid out.
THE CEDARWOOD — A Real Beauty — $598 And We Pay The Freight

This home has enjoyed a continuous popularity for nearly twenty years. It is perfect in proportion and a type that will never be out of fashion. There are four plans to choose from. Plan “C” contains a living room, kitchen and three bedrooms. If a dining room is desired, the rear bedroom can be made into a kitchen and the outside rear door changed at no additional cost. Another change sometimes made in plan “C” is to make a bathroom out of the middle bedroom, which slightly enlarges the front and rear bedrooms. The prices quoted are for siding on the exterior. In order to use shingles on the walls it is necessary to use wall sheathing under the shingles. See quotation for wall sheathing and building paper below. The porch is 16 feet wide and 8 feet deep. If you do not wish to build the brick piers shown in the photograph we can furnish full length columns to extend to porch floor. Porch is priced separately so you can order this porch or some other porch shown in the catalog or leave it off entirely if you so desire.

The Cedarwood is furnished with 6" x 6" built-up girders, 2" x 8" floor joists on 16-inch centers and 2" x 4" rafters on 24-inch centers. Ceiling height 8 feet. The roof has a one-quarter pitch. See complete specifications printed on Page 7.

17
The Harrison—Practical and Popular Home—$1327 And We Pay the Freight

Probably the greatest reason for the popularity of the Harrison is because it is 100% practical. It is simple in design and beautiful because of its simplicity. Every inch of floor space has been used to the best possible advantage. Everything is included in the plan that is essential to the modern home and all rooms are just the proper size. The first floor includes a bed room and dinette, or dining alcove, in addition to the standard living room, dining room and kitchen. If a first floor bed room is not desired, think of the many uses to which this room could be put. It would make an ideal library, music room, den or play room for the children. By the addition of a few windows, the room would become a charming sun parlor. If used as a sun parlor, the door connecting it with the dining room could be replaced by a wide cased opening or wide plastered arch, making its cheery atmosphere visible from both the dining room and the living room. The outside entrance to the kitchen is by means of a door at the grade level, opening onto a landing from which steps lead up to the kitchen and down to the cellar. On the second floor three fine bed rooms are arranged in addition to the bath room. Each bed room has a double window, assuring plenty of light and air. The sectional drawing over the second floor plan shows the ceiling heights available throughout the second floor rooms. The first floor has a ceiling height of 8'6". The Harrison is priced with asphalt roll roofing. The separate quotation below on strip shingles does not include shingles for the roof of the two dormers of the Harrison for due to their lesser slope, roofing is recommended for the dormers even if shingles are to be used on the balance of the roof. The porch is quoted separately so it can be purchased with the home if desired, omitted entirely or some other Aladdin porch purchased in its place. With the Harrison you receive 6" x 6" built-up girders, 2" x 8" first and second floor joists on 16-inch centers and 2" x 4" rafters on 24-inch centers. The roof has a five-twelfths pitch. See complete specifications on Page 7.

Shipment of any Aladdin Home can be made a few days after receipt of order.
THE WALNUT—Double Duty—$510 And We Pay the Freight

There are two reasons for the great popularity of the Walnut home. First, it is a very convenient, compact and attractive home. Second, it meets with particular favor from those who desire to build on a lot that is restricted to a higher priced home. It can be used until the time comes to build a larger home and then converted into a garage. If you would like plan “A” or “B” without garage doors we will omit the same, furnishing a window in their place without extra charge. Plans “C” and “D” represent one of the most practical of the new, modern ideas of home building—that of having the garage attached to the house. It is a decided convenience and gives you both home and garage at a price not much greater than the price of the home alone. The fireplace need not be built unless desired. No floor is furnished for garage section in plans “C” and “D”. With the Walnut home you receive 6’x6’ built-up girders, 2’x5’ floor joists on 16-inch centers and 2”x4” rafters on 24-inch centers. Ceiling height 8 feet. The roof has a one-quarter pitch. See complete specifications printed on page 7.

In this catalog you will find the GREATEST HOME VALUES ever offered in one book. Big Production Methods, no Dealers’ or Agents’ Profits and Cash Selling are the reasons.

PLAN A
The Walnut Plan A is designed to meet the needs of a couple requiring one bed-room and a large living-room.

PLAN B
The ever popular two bed-room plan. Easy to build, easy to convert into a high class garage at anytime.

PLAN C
The Walnut Plan C makes a wonderful combination home and garage. Note the big living-room 20 feet long.

PLAN D
A better balanced, more artistic exterior on a combination home would be hard to conceive. We consider it the best that has ever been offered to the public.
THE VIRGINIA—Different-Interesting-Well Balanced—$938 And We Pay The Freight

The Virginia attracts instant attention because it is different, interesting and well balanced. The simplicity and economy of Colonial architecture are the keynotes of the Virginia. The house presents a cozy appearance that tells you it is more than a place to live—it is a Home. Both plans are alike in general arrangement but one contains three bedrooms and the other two bedrooms, allowing you to make your selection according to your requirements. In both plans of the Virginia the living room extends out at the side, thus giving a sun parlor effect to the home. The portion of the living room that extends out at the side is separated from the balance of the living room by a circling arch at the ceiling line. This arch does not extend down to the floor and thus it is possible to furnish the entire room as one, or to furnish the projecting portion as a sun room, if desired. You will notice that the projecting portion of the living room is lighted by windows on three sides, a virtual sun parlor. See the colored interior photograph of the living room of the Virginia at the bottom of Page 4. The bedrooms and bath room are separated from the living quarters. Large, generous clothes closets are provided for each bedroom which add a very valuable feature to the home. Our designers have used every available inch of floor space in these plans which mean economy to the builder. The greatest width of the Virginia home is thirty feet, making it possible to build this home on a lot forty feet or more in width. With the Virginia home you receive 6" x 6" built-up girders, 2" x 8" floor joists on 16-inch centers and 2" x 4" rafters on 24-inch centers. Ceiling height 8 feet. The roof has a one-third pitch. See complete specifications printed on Page 7.

Plan No. 1...5947
Plan No. 2...938

The Aladdin Company helps the home builder to get full and lasting value for his investment.
The Larchwood—Model of Space Economy—$739 And We Pay the Freight

All three plans of the Larchwood home are models of the Economy of Space in plan arrangement. Not an inch is wasted. The gable roofed porch gives originality and distinction to a fine home. The 12' x 8' porch is priced separately so it can be purchased with this house or with other houses shown in the catalog. The porch piers can be built of brick concrete blocks or cobble stones as shown. If desired, the wooden columns can be furnished to set down on the porch floor at no extra cost. The ornamental piers would then be unnecessary. With the Larchwood home you receive 6' x 6' built-up girlers, 2' x 8' floor joists on 16-inch centers and 2' x 4' rafters on 24-inch centers. Ceiling height 8 feet. The roof has a one-quarter pitch. See complete specifications printed on Page 7.

The modern trend in home building has definitely turned to small, convenient houses. Lower Investment Costs, Lower Maintenance Costs and Easier House Keeping all favor small homes.

The above plan is size 24x30 feet. A feature is the hall leading from dining-room to two bedrooms and bath. Closets are unusually large.

Larchwood "D" is size 24x32 feet and gives besides the accommodations of No. 1, larger rooms with a cellar stairs adjacent to the kitchen.

The largest size of the three plans, the Larchwood "E" includes all conveniences possible in a house of this size—rooms being unusually well proportioned.
THE CONVERTIBLE

$377
And We Pay The Freight

The Convertible is a stepping stone to Homeland. It is a house designed for living quarters until a larger one is built, when it can easily be converted into a two-car garage. This is being done by thousands of people who own lots, either all paid for or partly paid for. Two sizes of the Convertible are shown. Either floor plan can be furnished in the 18' x 18' size, or in the 20' x 20' size. With the Convertible home you receive 6" x 6" built-up girders, 2" x 6" floor joists on 16" centers and 2" x 4" rafter on 24" centers. Ceiling height 8 feet. The roof has a one-quarter pitch. See complete specifications on Page 7.

THE BEECHWOOD

$481
And We Pay The Freight

It will pay you big dividends to put your own time and effort into buying and building your home the Aladdin way. You save dealers' profits, you pay for no waste lumber and you save on time and labor building the home. Only the highest grade materials are supplied for this house. Three floor plans are shown below. Choose the one that suits your needs best. The 14' x 6' porch is priced separately so you can include it with your order or not, as you wish. With the Beechwood home you receive 6" x 6" built-up girders, 2" x 6" floor joists on 16" centers and 2" x 4" rafters on 24" centers. Ceiling height 8 feet. The roof has a one-quarter pitch. See complete specifications on Page 7.
THE BASSWOOD
$492 And We Pay The Freight

You will not find any waste space in the two plans of the Basswood shown below. Since the home faces the wide way to the street, it gives the appearance of being a much larger home than it really is. The porch is priced separately so you can purchase it with your home, or not, as you prefer. With the Basswood home you receive 6" x 6" built-up girders, 2" x 6" floor joists on 16 inch centers and 2" x 4" rafters on 24 inch centers. Ceiling height 8 feet. The roof has a one-quarter pitch. See complete specifications on page 7.

Plan 1

Plan 2

THE COTTONWOOD
$366 And We Pay The Freight

The Cottonwood home is obtainable in two different sizes. The Number 1 plan is 20' x 16' in size and the Number 2 and Number 3 plans are 24' x 20' in size. The room arrangement of plan Number 2 is exactly the same as plan Number 1. If the Number 1 size is desired with two bed rooms, we can provide the home in the same plan arrangement as the Cottonwood No. 3 for $6.00 additional. The porch is priced separately so it can be built-up girders, 2" x 6" floor joists on 16 inch centers and 2" x 4" rafters on 24 inch centers. Ceiling height 8 feet. The roof has a one-quarter pitch. THE STRATFORD — Enduring Beauty — $1397 And We Pay The Freight

Modern architecture combined with skillful interior design distinguishes the Stratford—an immensely popular Aladdin home offered in two different sizes and plan arrangements. The Stratford is substantial—a lifetime home. Many distinctive touches lift the Stratford out of the ordinary. The snubbed gables—the shutters on the front windows—the gable roofed projection at the front providing for the entry and coat closet—the massive, circle top front door with heavy, ornamental hinges and Colonial style cylinder lock set—these are only a few of the many features that will appeal to you in this home. It is a home that will attract attention and cause favorable comment in any locality. At the prices quoted, siding is furnished for the outside walls. However, if wall sheathing is purchased with the home as quoted separately below, Cedar shingles as shown in the illustration can be furnished for the outside walls at no difference in price. The iron railing on the front terrace is included. Curved, plastered arches are suggested for the openings between the living rooms, dining rooms and entries and for the opening between the living room and sun room of the

Number 2 plan but square, cased arches can be furnished if desired at no difference in price.

With the Stratford home you receive 6' x 8' built-up center girders, 2' x 8' first and second floor joists on 16-inch centers and 2' x 6' rafters on 16-inch centers. Ceiling height 8'6" first floor, 8' second floor sloping to a minimum of 6' at front and rear.

The roof has one-half pitch. Asphalt strip shingles are furnished for the roof covering. See complete specifications on Page 7.

THE BELHAVEN—Plenty of Style—$744 And We Pay The Freight

There is plenty of style in the Belhaven home—style at low cost. It combines a fine exterior with four fine plans. The Belhaven is a home that for convenience and compactness cannot be surpassed. Little things, well planned, add much charm; such as well proportioned hood over front entrance, dormer over front windows, ornamental shutters, divided lights in windows, fifteen light front door. These are all items that add much to the value of your home at very little cost. Plan D is provided with an inside cellar stairway. If you wish to purchase one of the other Belhaven plans and desire a basement or cellar beneath the home, we suggest that you purchase our Cellar Stairway addition as described and priced on page 51. It provides a practical and convenient means of reaching both the cellar and the kitchen from the outside. The Belhaven home can be built with terraced front lawn as shown or set upon a higher foundation. With the Belhaven home you receive 6' x 6' built-up center girders, 2' x 8' floor joists on 16 inch centers and 2' x 6' rafters on 24 inch centers. Ceiling height 8 feet. The roof has a one-quarter pitch. The hood over front entrance and ornamental shutters as shown are included in the price quoted for the house. See page 7 for complete specifications.

Selling for Cash Makes These Low Prices Possible.
THE MARSHFIELD — A Snug, Distinctive Home — $1059 And We Pay The Freight

The Marshfield is a snug little home and the careful handling of fine details makes it a home of unusual distinction. It is compact, making it a home easy to heat and take care of. The front porch is included in the price. A fine location for a fireplace is suggested by the plans and illustration. However, we do not cut the openings for fireplaces and therefore they need not be built unless wanted. If you do not intend building the fireplace chimney, the two small windows in the end of the living room can be omitted and one full size window furnished in their place at no difference in price. The Marshfield is priced with siding on the outside walls and built in this manner, it is just as attractive as when shingles are used. If you desire to shingle the outside walls as suggested in the illustration, shingles can be substituted for siding at no additional cost providing wall sheathing is being used. See price below on wall sheathing, sub-flooring and building paper. The Marshfield can be purchased in two sizes. Plan A has a conveniently located dinette, or dining alcove, off from the kitchen. A great number of small homes today are being built without a dining room and there are many good reasons for not including them. If no dining room is arranged it means a smaller home to build, to heat, to clean and maintain. It saves the cost of expensive dining room furniture. Still, many people prefer a dining room and therefore Plan B of the Marshfield is also offered. Plan B is practically the same as Plan A with the exception that a dining room is provided in place of the dinette. With the Marshfield you receive 6" x 8" built-up girders, 2" x 8" floor joists on 16-inch centers and 2" x 6" rafters on 24-inch centers. Ceiling height 9 feet. The roof has a one-quarter pitch. See complete specifications on Page 7.

The modern trend in home building has definitely turned to Small, Convenient Houses.

Lower Investment Costs — Lower Maintenance Costs and Easier Housekeeping all favor small homes.

The Greenwood is a new Aladdin home design for which we predict a great future. Anyone looking for a neat, compact, perfectly balanced, small home, will obtain more than their money's worth in the Greenwood. Its outward attractiveness is due to the fact that it has perfect proportions and is absolutely free of architectural discord. It is a perfect example of the American cottage type of home. A study of the three plan arrangements shown below will increase your interest in the Greenwood. Plan No. 1 has an extra large living room so that one end of it can be used for dining purposes if desired. If a bath room is not required, the space that it occupies can be used as a dining alcove opening off from the kitchen. Some purchasers of Plan No. 1 who wish a dining room and require only one bedroom, will no doubt wish to take part of the living room space for a dining room, opening off from the kitchen. Then the remainder of the present living room and all of the front bedroom can be thrown together into a large living room. In Plan No. 2 a living room, dining room, kitchen and two bedrooms are obtained. Plan No. 3 is similar in arrangement to Plan No. 1 but the space occupied by a bath room in Plan No. 1 is used for a cellar stairway with grade entrance in Plan No. 3. If you wish further information and prices on the changes described above or if you are interested in making different but similar changes, write us describing your requirements and we will be glad to give your letter our expert judgment and write you fully on the subject. Because the materials furnished are cut to fit at our factory, the work of building the Greenwood is very simple and the labor cost is proportionately low. Even the labor cost can be saved if you decide to build your own home. The drawings and instructions we furnish with your order will make it easily possible for you to construct this house yourself. If you do not have time to do all of the labor, do what you can in your spare time and only hire the balance of the labor. Even this will make you quite a saving. The Greenwood porch is 12' x 6' in size. It is quoted separately so it need not be purchased with your home unless desired. With the Greenwood home you receive 6' x 6' built-up girders, 2' x 6' floor joists on 16-inch centers and 2' x 4' rafters on 24-inch centers. Ceiling height 8 feet. The roof has a one-quarter pitch. See complete specifications on Page 7.

If the materials you receive with your home are not all that we claim them to be in quality and quantity, the Aladdin Company stands ready to return your money.
THE SHERBROOKE — A Home With Appeal — $1725 And We Pay The Freight

The Sherbrooke is surely a home with appeal. Excellent use has been made of the best and most pleasing lines in bungalow architecture in designing this home.

The illustration above shows shingles used on the outside walls. They can be furnished without additional cost, if desired, providing wall sheathing is purchased with the home as quoted separately on this page. Otherwise siding would be furnished for the outside walls.

You are offered your choice of two plans on the Sherbrooke home. Plan Number One is a one-story house with attic space available. At the price quoted on this home we furnish one thickness of flooring to cover the same area as is occupied by the second floor rooms of the Number Two Plan. The Number Two Plan has one less bedroom on the first floor but two bedrooms are arranged on the second floor. In other respects the two plans are practically identical.

The porch roof runs back into the roof of the house. The porch is included with the home at the price quoted as is also the small stoop in the rear.

With the Sherbrooke home you receive 6" x 8" built-up girders, 2" x 10' first floor joists on 16' centers, 2" x 8' second floor joists on 16' centers and 2' x 6' rafters on 24' centers. The roof has a one-quarter pitch and slate surfaced asphalt strip shingles are provided for the roof covering. The eave projection is 3 feet. Height of ceiling 9 feet first floor, 8 feet second floor sloping to 6 feet 2 inches at extreme ends of second floor bedrooms of Number Two Plan. The second floor bedrooms are unusually large, one being 12 feet by 15 feet in size and the other 11 feet 8 inches by 15 feet in size. Each bedroom is provided with a closet. If you decide to order the Number One Plan, it is interesting to know that at some future date, should you ever desire, you can finish off the attic space on the second floor and obtain the same number and arrangement of rooms that are shown on our second floor plan of the Sherbrooke No. 2. See complete specifications on Page 7.

THE ELMWOOD—Four Ways To Build This Home $680 And We Pay The Freight

Four plans of the Elmwood home offer a fine choice of room arrangement in this attractive home. Two and three bedroom plans are available. Some of our customers who select the Number 1 plan have us place the bath room door in the partition between the kitchen and bath room. They then use the bath room for a pantry. Others have us provide a cased opening between the kitchen and bath room and they then use the bath room as a dining alcove. When this last described change is made we often omit the partition between the living and dining rooms, forming a living room 12' x 19' in size. Either of these changes may interest you providing a bath room is not desired. Similar changes can be made in any Aladdin home. The 14' x 8' pergola type porch with weather proof roof is priced separately so you can purchase it with your home or not, as you prefer. Many purchase and use the Cedarwood porch on the Elmwood. With the Elmwood home you receive 6' x 6' built-up girders, 2' x 8' floor joists on 16-inch centers and 2' x 4' rafters on 24-inch centers. Ceiling height 8 feet. The roof has a one-quarter pitch. See complete specifications on Page 7.

The ALADDIN Company Belongs To No Price Fixing Trade Associations, Pays No Profits Or Commissions To Dealers Or Agents, And Thus Insures Full Value For Every Dollar You Spend On Your Home.
The Nantucket — A Master Design — $1155 And We Pay The Freight

Dignity, Strength and Beauty—all are evident from the most casual glance of the exterior of the Nantucket. Refinement in every detail is manifest. A more careful study of the outward appearance and the interior arrangement, bears out your first impression. Truly, in appearance and plan arrangement, the Nantucket is a master design. Also, it is a great satisfaction to know that the construction used in your home is not a hit and miss construction. Ample strength in all beams, girders, joists, rafters and all framing is assured. Aladdin’s engineers have accurately figured the necessary requirements, and then, for good measure, have given you an even heavier construction. And you will be surprised and pleased at the high quality of all materials you receive. It is an actual fact that hundreds of our customers write us each year saying that the materials they received with their Aladdin home were of a higher quality than they could have purchased locally AT ANY PRICE. Surely such reports permit us to say that Aladdin materials are far above the average in quality. Two plans of the Nantucket are presented—one of two bedrooms—the other of three. Both are complete, compact and provide more than the usual number of good features desired in a modern home. Both plans give an exceptionally large living room and a well proportioned dining room. In both plans the kitchen is large enough to accommodate all necessary fixtures and furniture and small enough to reduce the work of meal preparing and serving to the minimum. Both plans isolate the bedrooms and bath room from the living quarters of the house. Each bedroom has its closet. In the Number Two plan an exceptional feature, rarely obtained in a one-story home, makes it possible to go from the kitchen to the bedrooms or bath, without passing thru the living room or dining room. The illustration at the top of the page shows the Number Two plan. The rear addition shown in the illustration, is of course, not included with the Number One plan. The porch is quoted separately and can be purchased with the home, or not, as you prefer. Sufficient space for second floor rooms is not available in either plan. With the Nantucket you receive 6" x 8" built-up girders, 2" x 10' floor joists on 16-inch centers and 2' x 6" rafters on 24-inch centers. Ceiling height 9 feet. Shutters for front windows included as shown in illustration. The roof has a one-quarter pitch. Asphalt strip shingles included in price. See complete specifications on Page 7.

You Will Start Saving Money The Day You Buy An Aladdin Home
THE PORTLAND—The Income Bungalow Type—$1799 And We Pay the Freight

The Portland is designed for use by one family and as a one family home it will make its greatest appeal to most people. The first floor plan of the Portland includes a living room, dining room, kitchen, two bedrooms and a bath. For the second floor you have your choice of two different plan arrangements. If you wish two second floor bedrooms, Second Floor Plan No. 1 will interest you. This plan includes two bedrooms and a bath. However, if you require three second floor bedrooms, you will be most interested in Second Floor Plan No. 2. In this plan a third bedroom is obtained by adding a dormer to the rear, the same as the large dormer shown in the illustration which provides for the front bedroom. The Portland is priced separately in both second floor plan arrangements. Whichever second floor plan you select includes the first floor plan as shown. This home is the Income Bungalow type because it is possible to reach the second floor from the front entrance without passing into any of the first floor rooms. For this reason it would make an ideal home for those who wish to rent one or more of the second floor rooms. Also, if Second Floor Plan No. 2 is used, the three second floor bedrooms could be made to serve as a living room, bedroom and combination kitchen and dining room—a complete apartment for a small family. The income derived from the rent of second floor rooms would help you to pay for the home and maintain it. As a one family home, the two bath rooms would be a convenience, but not a necessity. If not equipped as a bath room either of these rooms could be used for other purposes, such as a dining alcove, pantry, sewing room, store room, etc. The 24' x 8' porch is included with the home and the price also includes green slate-surfaced asphalt strip shingles for the roof. With the Portland you receive 6' x 8' built-up girders, 2' x 10' first floor joists on 16-inch centers and 2' x 8' second floor joists on 16-inch centers. The rafters are 2' x 6' on 24-inch centers and the roof has a one-third pitch with a two-foot eave projection. First floor ceiling height 9 feet. Second floor rooms have 8-foot ceiling height throughout with exception of closets where ceiling slopes. See complete specifications on Page 7.

THE WHITEHALL—A Splendid Model—$486 And We Pay The Freight

There is a strong appeal in this pretty hip-roof cottage. Six convenient plan arrangements offer a fine selection. All six of the Whitehall plans are 20' x 24' in size. Three of them are arranged to face the wide way to the street and three of them face the narrow way. Ornamental shutters are furnished for the front windows of the Whitehall home. Paint colors as pictured can be furnished for the shutters or a plain color can be used if desired. If a cellar is desired under the Whitehall home, see our separate quotation on Cellar Entrance Addition on Page 51. Select the plan that suits you best and then, if you desire, write for further information. We can make shipment within a week after receipt of your order. With the Whitehall home you receive 6” x 6” built-up girders, 2” x 6” floor joists on 16” centers and 2”x4” rafters on 24” centers. Ceiling height 8 feet. The roof has a one-quarter pitch. Brick terrace and railing at front are not included in price but if desired, the two sections of iron railing with the two iron corner posts can be furnished for $12. See complete specifications printed on Page 7.

THE CARLTON—First Floor Bed Room A Feature—$1396 And We Pay The Freight

The Carlton is a type of home that will be as modern and up-to-date fifty years from now as it is today. Without being gaudy it is attractive—without being elaborate it is ample. No attempt has been made to embellish the home. Nothing could be added without really destroying its beauty. In short, the Carlton seems to stand complete. The porch, as will be noted, is eight feet in depth and extends across the entire width of the house. It is roofed by a continuation of the main house roof and is included with the home at the price quoted on the house itself. From the standpoint of appearances, we recommend that the ornamental brick porch piers be built as shown in the illustration. However, at no additional charge we can, if you desire, furnish the wooden porch columns in a greater length to set down on the porch floor. This would make the ornamental piers unnecessary. The Carlton is priced with clear and knotless siding on the outside walls but if shingles are desired on the walls or for just the gable ends as shown in the picture, they can be furnished without extra cost providing sheathing is used beneath them. Wall sheathing, sub-flooring and building paper are quoted below. If you do not wish to build the fireplace chimney, the two small windows on each side of the chimney can be omitted and a full sized window substituted at no additional cost. The interior arrangement provides all that can be desired in a home of these proportions. The first floor, in addition to the usual living room, dining room and kitchen, includes one bedroom, opening off from the living room in the front of the house. The second floor has two good size bedrooms, each with a large closet. With the Carlton home you receive 6' x 8' built-up girders, 2' x 8' first and second floor joists on 16-inch centers and 2' x 6' rafters on 24-inch centers. Ceiling height 9 feet first floor, 8 feet second floor sloping to 6'9" at extreme ends of bedrooms. The roof has a five-twelfths pitch with a two foot eave projection. Asphalt strip shingles furnished for the roof. See complete specifications on Page 7.

Modern, efficient manufacturing methods, Readi-Cut construction and CASH Selling result in lowest possible prices.
THE PASADENA—A Charming, Comfortable Home—$1235 And We Pay The Freight

The Pasadena—the beautiful. A home of sunshine, flowers, trees and foliage! This remarkable home is one of Aladdin's most notable offerings to home builders. Remarkable in design, original in arrangement, and lastly, truly astonishing in low cost of materials. The design is a striking result of the work of a master architect of bungalow homes. It represents the new thought in bungalow architecture. The departure from the rough and blunted lines to the more beautiful and substantial touches is symbolical of one's desire in a home. And the room arrangement is no less a success. Both plans hold a charm that is unusual—both have convenience, comfort and spaciousness that seem almost impossible to include in a home of these dimensions. On a corner lot, the front entrance of the Pasadena, artistically hooded, would give access to one thoroughfare while the handsome pergola porch would lead to the other. In Floor Plan No. 1 the living room is somewhat larger than in Floor Plan No. 2, but in both cases it is a large room and well lighted. The arrangement is somewhat different in the two plans, Plan No. 2 having an extra bedroom. Throughout both plans, however, the architect has kept in mind that light and fresh air are necessary to the everyday life of the modern family and these have been provided for in abundance. A fireplace can be built in either plan or omitted if preferred. The Pasadena is priced with siding on the outside walls. With a siding exterior, the home presents a very attractive appearance. However, shingles can be furnished for the outside walls at no additional cost providing wall sheathing is used under them. Wall sheathing, sub-flooring and building paper are quoted separately below. Since the above photograph of the Pasadena was taken, the home has been improved by the furnishing of fifteen lights, rather than ten lights, in the French doors at the front. The Pasadena stands out as a home of distinction and refinement wherever it is built. The 8' x 14' porch shown in the illustration of the Pasadena home is more elaborate in design than the other pergola roofed porches shown on Aladdin homes. You may wish to substitute one of these other porches for the Pasadena porch. For instance, the Plymouth porch shown on page 38, while not as ornamental as the Pasadena porch, could be used satisfactorily on the Pasadena home. This is the reason we quote on porches separately. It gives you a selection and also helps you to control your building costs. If you are not buying the porch and therefore prefer a window instead of the French door in the end of the living room, we will make this change without extra cost. With the Pasadena you receive 6' x 8' built-up girders, 2' x 10' floor joists on 16-inch centers and 2' x 6' rafters on 24-inch centers. Ceiling height 9 feet. The roof has one-third pitch and the exposed eaves project 2'-6". Asphalt strip shingles furnished for the roof. See complete specifications on Page 7.

The Avalon—Graceful and Stately—$2129 And We Pay The Freight

The Avalon is a graceful and stately home produced in the ever-popular Dutch Colonial type of architecture. Skillful handling of details is largely accountable for its charm. Nothing could be added to the Avalon to increase its beauty. The circling hood over the front entrance, the divided lights in the windows and front door, the shutters on the front windows, the pergola roofed sun parlor at the end of the house—these are the decorative touches that make the Avalon differently beautiful. The Avalon is priced with siding on the outside walls but is pictured with shingles used on the outside walls of the second floor. Shingled side walls can be provided without extra cost providing wall sheathing is used under them. Wall sheathing, together with sub-flooring and building paper, are quoted separately below. Of course, if siding only is used on the outside walls, the same color effect can be obtained as shown in our illustration by using light paint for the lower floor and dark paint for the upper. The circular hood for the front entrance reaches you completely built-up making it only necessary to set it in place. Think of the labor saving this means to you. It would take a carpenter a day to lay out, cut, measure and assemble just this one small part of the home. We cut the hood by machinery and complete it with the brackets in less than an hour. The interior of the Avalon leaves nothing to be desired in a home of this size. The center hall with the conveniently located coat closet and the stairway to the second floor, leads to the left through a square, cased opening or curved plastered arch, (whichever your prefer) to a large living room. From the living room a French door leads to a roomy sun parlor that will perhaps be the most popular room in the house. From the living room a door also leads to the rear hall. The rear hall connects the living room with the kitchen. Off from it opens a first floor toilet, a convenient closet and the door to the cellar stairs. Both the dining room and the kitchen are large and the door and window arrangement in these rooms permits perfect arrangement of fixtures and furniture. The second floor contains four large, corner bed rooms, all with three windows and all lighted on two sides. An exceptionally large closet is provided off from each bed room and a linen closet will be found in the hall. The stairwell in the second floor hall is guarded by an attractive rail, balusters and newel posts. The sun parlor pictured on the Avalon is included with the house at the price quoted as are also green, slate-surfaced asphalt strip shingles for the roof and the ornamental shutters for the front windows. With the Avalon you receive 6' x 8' built-up girders, 2' x 10' first and second floor joists on 16-inch centers and 2' x 6' rafters on 24-inch centers. Ceiling height 9 feet first floor and 8 feet second floor. The main roof has a one-quarter pitch. See complete specifications on Page 7.

The Sprucewood is a typical American home. Straight architectural lines create a pleasing and substantial type of house. The choice of two sizes and the choice of four upstairs plans will meet the needs of any size family. The prices quoted are for siding on the exterior. In order to use shingles on the walls, as shown in the photograph, it is necessary to use wall sheathing under them. See quotation for wall sheathing and building paper below. The porch is 20 feet wide and 8 feet deep. If you do not wish to build the masonry piers as shown in the photograph we will furnish full length columns to extend to porch floor. Porch is priced separately so you can order this porch or some other porch shown in the catalog or leave it off entirely if you desire. With the Sprucewood home you receive 6" x 6" built-up girders, 2" x 8" first and second floor joists on 16-inch centers and 2" x 4" rafters on 24-inch centers. Ceiling height 9 feet first floor and 8 feet second floor. The roof has a one-quarter pitch. See complete specifications on Page 7.

THE FAIRFIELD—Bright and "Homey"— $1395 And We Pay The Freight

There is a charm about the Fairfield that attracts your instant attention. It is a bright and "homey" plan. The home is so distinctly attractive that it has been necessary for us to design it in two different plans; one provides for a 25-foot width home and the other for a 28-foot width home. This is to adapt the house to lots of different frontage. In both of the Fairfield plans our cellar stairway addition is arranged off the rear of the kitchen and is included at the price quoted. This permits entrance direct to the kitchen or to the cellar, from the outside of the house. The porch also is an integral part of the home and is included in the price. In the No. 1 plan the living room extends across the entire front of the house. Two bedrooms are provided for in this plan. An extra bedroom 10 x 12 feet in size could be obtained if desired by taking the space from the end of the living room. This would leave the living room 16 x 12 feet in size and would give an arrangement and number of rooms practically the same as in the No. 2 plan. This change can be made for you in the No. 1 plan for $14.00 additional. Three bedrooms are arranged in the No. 2 plan. The fireplace in the end wall of the living room is a very cheerful feature of this home but it need not be built if not desired. If the fireplace is not used the two small windows on each side of the chimney can be omitted and one full size window furnished in substitution at no difference in price. The finely proportioned dormer in the front roof embellished by the three unusual brackets and the end of the dining room projecting out as a bay window beyond the line of the main house are outstanding touches that help to beautify this striking home. The Fairfield is a home that will give complete living satisfaction and ever increasing charm throughout the years to come. With the Fairfield home you receive 6" x 8" built-up girders, 2" x 8" floor joists on 16-inch centers and 2" x 6" rafters on 24-inch centers. Ceiling height 9 feet. The roof has a one-quarter pitch with a two-foot eave projection and asphalt strip shingles are furnished for the roof. See complete specifications on Page 7.

Remember that the plan arrangement of any Aladdin Home can be reversed so the rooms will come on the opposite side to that shown, if that arrangement will better suit your location.
THE PLYMOUTH—A Perfect Home—$1173 And We Pay the Freight

The Plymouth is often referred to as a "perfect" home because it is average in size, pleasing in appearance and convenient and complete in arrangement. While the impression is that of a story-and-a-half house the second floor rooms are square with full height side walls. Two plans of the Plymouth are shown below. The larger proportions of the Number 2 plan have induced us to include more windows in the second floor bedrooms. In both plans, closet space is ample. This is particularly true in the Number 2 plan which provides for two closets off from the large, front bedroom, a closet off from each of the other bedrooms, a linen closet off from the hall and another large closet off from the hall large enough for trunks or storage. An interior view of the Plymouth is shown in colors at the top of Page 4. In both plans, a French door leads to the porch at the side. The porch is priced separately below and can be included with your home if desired. Sometimes the Pasadena porch as pictured on Page 34 is purchased in substitution. With the Plymouth you receive 6' x 8' built-up girders, 2' x 8' first and second floor joists on 16-inch centers and 2' x 4' rafters on 24-inch centers. Ceiling height 9 feet first floor and 8 feet second floor. The main roof has a one-quarter pitch and green, slate-surfaced asphalt strip shingles are furnished for the roof covering. See complete specifications on Page 7.

THE WILDWOOD — A Superb Home — $1465 And We Pay The Freight

The Wildwood is one of the most attractive square type homes ever designed. The usual home of this type is plain in appearance. Note how this effect has been entirely eliminated in the Wildwood. Through skillful handling of the exterior by means of the flaring projection of the eaves—the brackets under the eaves—the belt under the second story windows—the square divisions in the top sash of the windows—by these means plainness has been supplanted by beauty—severity by delicate lines and artistic embellishments. It has long been acknowledged that the square type of home is most economical to build, for only in this type can the maximum of floor space be obtained. How well this is exemplified in the Wildwood! The first floor rooms give more space and better possibilities in the arrangement of furniture than is usually obtained in a much larger home. On the second floor the rooms are also large and generous clothes closets are provided. The Wildwood is priced with siding on the outside walls of both the first and second floors. However, if shingles are desired on the outside walls or above the belt line as shown in the photograph, they can be furnished without additional cost providing sheathing is used beneath them. See separate quotation below on wall sheathing, sub-flooring and building paper. The 14' x 8' porch can be purchased with the home, or not, as you prefer. It is quoted separately. We also quote separately on this same style of porch in a 22' x 8' size in case a large porch is desired. With the Wildwood home you receive 6' x 8' built-up girders, 2' x 10' first floor joists on 16-inch centers, 2' x 8' second floor joists on 16-inch centers and 2’ x 6’ rafters on 24-inch centers. Ceiling height 9 feet first floor and 8 feet second floor. The roof has a one-third pitch and the eaves project 2 feet. Asphalt strip shingles are included for the roof. See complete specifications on Page 7.

FIRST FLOOR PLAN

SECOND FLOOR PLAN
THE BRISTOL—Standard of Good Taste—$629
And We Pay The Freight

Quaint English characteristics emphasize the charming features of this beautifully designed home. It is a standard of good taste. With the snubbed gables, the projected entrance, its overlapping gable and the massive wooden door, the Bristol takes on a definite character that sets it apart from the average modern small home. In addition to this unusual exterior atmosphere, it offers an astonishing amount of comfort and convenience in the interior arrangements. The four different floor plans present a wide choice that will suit perfectly the desires of any family. If a bathroom is not desired, you will note that by changing the location of the bathroom door the room can be made to open off from the kitchen forming a large sized and convenient pantry. This change can be made for you at no additional cost in Plans No. 1, 2 or 4. In the Bristol Plan No. 4, which contains no dining room you might prefer to have the bathroom connected with the kitchen by an arch. This would form a convenient dining alcove. Plan No. 2 provides for stairs down to the cellar. An arched entrance to the dining room predominates in three of the plans. In Plans No. 3 and No. 4, two bedrooms are shown. The Bristol answers every demand for a well proportioned small home that carries out style and attractiveness on the outside, and the utmost comfort and convenience within. With the Bristol home you receive 6" x 6" built-up girders, 2" x 6" floor joists on 16-inch centers and 2" x 4" rafters on 24-inch centers. Ceiling height 8 feet. The roof has a one-quarter pitch. See complete specifications on Page 7.

A Letter from Indiana

Dear Sirs:
We want to thank you for your splendid quality of material and quick service you gave us on our Aladdin home. We are living in it and like it fine. I am sure we could not say too much in favor of it. The carpenters said they never worked with better material and it goes up so fast. We feel we saved quite a bit by buying a ready-cut home. You may use this letter if you care to and if anyone cares to write me I will certainly be glad to tell them how pleased we were and all about it.

Ora L. Wolfe.

THE CAPITOL—Fine Dutch Colonial Type—$1688 And We Pay The Freight

The Capitol is an imposing home. Large sized rooms throughout and four bedrooms with ample closet space make it a wonderful house for a large family. Some of our customers use the library as a breakfast room, opening off from the kitchen. Others have used the same space for a first floor bedroom and still others have used it for a first floor toilet with hallway connecting the living room with the kitchen. On the second floor the sewing room is often used as a second bath room, opening off from one of the front bedrooms. A square, cased opening is regularly provided between the hall and living room and between the hall and the dining room. Each opening is just the proper size for a pair of French doors. If French doors are desired they can be purchased separately as described and priced on Page 51. Another treatment, often used in present day homes is to use curved, plastered arches in place of cased openings. If you do not wish to use French doors in the openings above mentioned, curved, plastered arches can be furnished in place of the cased openings at no difference in price. Changes of this nature, to make your new home express your own individuality, are always worth considering. The 14' x 8' porch and the 14' x 10' porte cochere or covered drive, are both roofed with a tight, weather-proof roof and both are priced separately so they can be purchased with the home or not, as you prefer.

With the Capitol you receive 6' x 8' built-up girders, 2' x 8' first and second floor joists on 16-inch centers and 2' x 6' rafters on 24-inch centers. Ceiling height 9 feet first floor and 8 feet throughout second floor. The roof has a one-quarter pitch and slate-surfac ed asphalt strip shingles are included. See complete specifications on Page 7.
Both dignity and character are expressed in the treatment of this delightful home. Its two hooded entrances and the shutters on the front windows, are included in the price and lend their assistance in beautifying the exterior. The Hartford can be purchased in your choice of the two different sizes and plan arrangements shown below. In the No. 1 plan which is pictured above, the kitchen entrance is at the side and at the grade level. The outside door opens onto a landing from which two steps lead up to the kitchen. From the same landing, steps lead down to the basement. In the No. 2 plan the outside kitchen entrance is arranged in the rear wall near the head of the cellar stairs. This is not a grade entrance. High casement windows are used in the end wall of the dining room of the No. 1 plan and in the rear wall of the dining room of the No. 2 plan. This permits placing a buffet beneath them. Many builders of the Hartford home add a porch off from the end of the living room. The Plymouth porch shown on Page 38 or the Pasadena porch shown on Page 34 are usually selected. With the Hartford you receive 6" x 8" built-up girders, 2" x 8" first and second floor joists on 16-inch centers and 2" x 4" rafter on 24-inch centers. Ceiling height 8 feet and 6 inches on first floor, 8 feet second floor. The main roof has a one-quarter pitch and green, slate-surfaced asphalt strip shingles are furnished for the roof covering. See complete specifications on Page 7.

THE NORWOOD—The Wise Builder’s Choice—$1219
And We Pay The Freight

There is a fine sense of dignity—even a note of formality—in the proportions and outline of the Norwood. It is thoroughly modern in adaptation while gaining inspiration for its type from the half-timbered English dwelling. In fact the Norwood is the typical English type of home. Aladdin designers have carefully and shrewdly avoided the one big fault common to this type. Usually, due to the steep roof pitches characteristic of this style of architecture, very little space is available for second floor rooms. In the second floor of the Norwood, three good sized bedrooms and a roomy bath are obtained and the ceiling height is ample throughout. The second floor ceiling height is 8 feet and the slope of the roof reduces this height at no point to less than five and one-half feet—high enough for the largest pieces of bedroom furniture. Also, just 30 inches away from the lowest points, full 8 foot ceiling height is reached. The first floor has a ceiling height of eight and one-half feet. As you enter the Norwood from the front, you pass through a curved doorway into an entry that leads to the living room through a French door. A French door from the living room also opens onto the 8’ x 10’ side porch. This porch is quoted separately below, so it can be purchased with the home, or not, as your prefer. If the porch is not desired, we can furnish a window in place of the door at no difference in price. The living room is generous in size, well lighted on three sides and the stairway to the second floor leads up from the rear. The dining room and kitchen are also well proportioned and well lighted. The rear entrance to the Norwood by means of the door at the grade level, provides an ideal arrangement. This door opens onto a landing from which steps lead up to the kitchen and down to the basement. The cellar stairway is directly beneath the main stairway. With the Norwood you receive 6” x 8” built-up girders, 2’ x 8’ first and second floor joists on 16-inch centers and 2’ x 6’ rafters on 24-inch centers. The roof has a one-half pitch and slate-surfaced asphalt strip shingles are furnished for the roof covering. Shutters for front windows are included as shown in the photograph. See complete specifications on Page 7.

Aladdin furnishes highest quality materials, performs about one-third of the construction labor for you by machinery at the factory, quotes one low price on the entire bill of material and ships everything in one car, freight paid to your station. Satisfaction or your money back is guaranteed.

The Birchwood is a home of dream-like perfection. It will measure up to your highest expectations, from the strength of its sturdy timbers to the charm and beauty of its woodwork and finish. Shrewd buyers immediately recognize the opportunity to avoid paying the top prices charged by regular dealers—an opportunity made possible by dealing direct with the Aladdin Mills. It is just like buying your materials at a special discount of twenty percent to thirty percent. Comparing the price of this attractive home with the price asked by other concerns, prove the big savings Aladdin gives you. The porch is priced separately. It can be purchased with the home or, if you prefer, it can be omitted. Perhaps some other porch shown in this catalog would be more satisfactory to you. The wooden columns of the Birchwood porch can be furnished to rest on the porch floor at no difference in price. It would then be unnecessary for you to build the ornamental brick piers. With the Birchwood home you receive 6" x 6" built-up girders, 2" x 8" floor joists on 16-inch centers and 2" x 4" rafters on 24-inch centers. Ceiling height 8 feet. The roof has a one-quarter pitch. See complete specifications on Page 7.

Buying All Materials From One Company Under a Strong Guarantee of Satisfaction Commands for You the Best Price and Saves Trouble.
THE HICKORY—A Style That Never Grows Old—$898 And We Pay The Freight

The Hickory is a strong, substantial, dignified and complete American home of a style that never grows old. The home is pictured with brown side walls and with ivory trim but different paint colors can be furnished for the exterior providing you prefer some other color treatment. Many Hickory owners use the same color combinations as are pictured on the Sprucewood home, shown on Page 36. The winter setting in which the Hickory is shown suggests the fact that your Aladdin home will be warm and snug in coldest winter weather. We have received many letters from Aladdin home owners telling us how easy it is to heat their homes in zero temperatures. See interior view of the Hickory at the bottom of Page 5. The Hickory porch is priced separately. This permits you to buy it, omit it, or purchase some other porch if you prefer. With the Hickory you receive 6" x 6" built-up girders, 2" x 8" first and second floor joists on 16-inch centers and 2" x 4" rafters on 24-inch centers. Ceiling height 9 feet first floor and 8 feet second floor. The roof has a one-quarter pitch with 18-inch eave projection. See complete specifications on Page 7.

We Sell for Cash. Those Who Sell on Credit Must Add Extra Profit to All Prices to Make Up for Their Credit Losses.
THE NEWPORT—Original in Design—$1240 And We Pay The Freight

This quaint design is as original a home as was ever designed! The Newport stands out in a manner that commands instant attention from the seeker of a home combining convenience and practicability with individuality of design. These features are admirably and abundantly supplied in the Newport. Two plans of the Newport are presented. While both plans include a living room, dining room, two bedrooms and a bath, it is interesting to study the differences between the two plans. Plan No. 1 is a little simpler in design and a trifle smaller in size. Plan No. 2 contains all the features of the No. 1 plan and in addition is provided with a convenient coat closet off from the living room, a handy place for a refrigerator at the head of the cellar stairs off from the kitchen, larger bedrooms and a larger kitchen. Both plans present the same outward appearance viewed from the front or left side. However, the No. 2 plan is provided with a similar projection on the right side to the dining room projection on the left side of both plans. This perhaps would make the No. 2 plan the more attractive house from the exterior when viewed from the right. Both plans, including the porch and eave projection have a total width of thirty-seven feet and therefore either plan could be satisfactorily built on a lot 50 feet or more in width. If the fireplace is not to be built, we can omit the two small windows on each side of the fireplace chimney and furnish one full-size window in substitution at no difference in price. Also remember that if the location of your lot or your view is such that you would prefer the living room, dining room and kitchen on the right side of your home, rather than on the left side as shown, the house can be furnished in reverse plan arrangement at no additional cost. If this change is desired you have only to mention it when placing your order. The front and side porches shown on the plans of both homes are included in the price. The porches are furnished by us without the floors with the intention that you will secure material locally and build the floors of cement, brick or tile. With the Newport home you receive 6" x 8" built-up girders, 2" x 8" floor joists on 16-inch centers and 2" x 6" rafters on 24-inch centers. Ceiling height 9 feet. The roof has a one-quarter pitch and is furnished with green, slate-surfaced asphalt strip shingles. Porches, as explained above, are included in price as are also the ornamental shutters for the front windows. See complete specifications on Page 7.

THE FIRWOOD — Low in Cost — Not Cheap — $487 And We Pay The Freight

The Firwood is a low-cost home—not a cheap home. We guarantee to send you Knotless Flooring, Knotless Siding, Knotless Woodwork and Knotless Doors. These are not "cheap" materials but we sell them to you for less money than you can purchase ordinary materials elsewhere. You can build it yourself for the materials are Ready-cut. This means that the difficult work of planning the construction and cutting the materials is all done before your house reaches you—about thirty percent of the labor already done for you before you start. A carpenter is not necessary. Save the cost of high wages. The amazingly low price for which you are able to buy the Firwood, together with a little of your time, will make you the owner of a fine home at a price about half the usual cost. Four splendid room arrangements are shown here—even a three bedroom plan for a family of six. Plan B is shown with cellar stairs. If they are not wanted the space they occupy can be turned into a pantry or the partition moved forward to form a dining alcove. For others who do not wish the cellar stairway in plan B we sometimes rearrange the partitions on the left side of the home to form a living room, dining room and kitchen. The same thing applies to the bath room. If not wanted the partitions can be moved to form three bedrooms. These changes can be made in plan B without additional cost to you. Price quoted above does not include porch. The house can be built without the porch for the present time or if you desire, you can purchase the porch with the home. With the Firwood home you receive 6' x 6' built-up girders, 2' x 6' floor joists on 16-inch centers and 2' x 4' rafters on 24-inch centers. Ceiling height 8 feet. The roof has a one-quarter pitch. See complete specifications on Page 7.

THE MAPLES—Be It Ever So Humble—It’s Our Own—$374 And We Pay The Freight

The Maples brings happiness to thousands of families who do not require a larger home. Also, it permits the family of modest means to get into a snug, warm and strong little home at almost unbelievable low cost. There is more pleasure and satisfaction in owning a small home than living in a large rented one. At the end of the year what work you have done has been for yourself and not for the landlord. This home is being put up by many owners who have had no experience in carpenter work. Our instructions with pictures explain every step. The Maples is shown below in four different room arrangements. The plans are for the 18 x 18 foot size. The Maples can also be furnished in a 22 x 22 foot size or in a 26 x 26 foot size. If purchased in the 22 x 22 foot size each room would be two feet larger each way than shown in the plans on this page. If purchased in the 26 x 26 foot size each room would be four feet larger each way. The hood and stoop are priced separately. This permits you to purchase both of them, either of them, or omit them both if you prefer. Very often the Maples home is sold with one of our small porches included for use on the front. By quoting such items as porches, stoops, etc., separately you can make your home just as you want it and control your building costs. With the Maples home you receive 6" x 6" built-up girders, 2" x 6" floor joists on 16-inch centers for the 18" x 18" sizes and 2" x 8" floor joists on 16-inch centers for the 22" x 22" and 26" x 26" sizes. The rafters are 2" x 4" on 24-inch centers for the 18" x 18" and 22" x 22" sizes. For the 26" x 26" sizes the rafters are 2" x 6" on 24-inch centers. Ceiling height 8 feet. The roof has a one-quarter pitch. See complete specifications on Page 7.

A Letter from Massachusetts

Dear Sirs:

I must write you again to say how much I appreciate what you have done for me in hurrying my Aladdin home to me. Just to think in two weeks from the day I sent my order in, it was here. Everything looks so nice—doors are beautiful. And it all came so nicely, not a piece missing. Remember always, whenever I hear anybody talking of building, I shall try to influence them in all ways to send to you.

(Mail address sent upon request).

Mrs. Lillian G. Best.

THE REDWOOD—A Little Kingdom of Your Own—$496 And We Pay The Freight

The Redwood is one of the prettiest small homes ever designed. It gladdens the hearts of those who are looking for a small, compact house of up-to-date appearance. It is astonishing to find so complete a home in such small compass and with so many conveniences at so low a price. And the quality of the materials that come with the Redwood is identical with that found in the largest and highest priced Aladdin home. There is only one grade in all Aladdin homes—the best. Good materials make a sturdy, lasting home and one that is always easy to sell should you want to do so. The construction used in an Aladdin home is the same as that used in the best Architect-designed, Contractor-built house erected anywhere. We are offering this excellent home at a price only made possible because of our tremendous buying power, our direct to you sales plan and our cash prices. You buy not from a retailer, not from a jobber, not from a wholesaler, but direct from the manufacturer. We make it easy for you to buy right, easy for you to build well and easy for you to own this splendid home. You can build the Redwood yourself for the materials you receive are cut to fit and we furnish drawings and pictures showing where each piece goes. We also furnish a book of instructions telling you just what to do, when to do it and how to do it. Our book of instructions also tells you about many "short cuts" that will save you time when building your home. Even women have told us that they erected their Aladdin Home or assisted in the erection. With the Redwood home you receive 6" x 6" built-up girders, 2" x 6" floor joists on 16-inch centers and 2" x 4", rafters on 24-inch centers. Ceiling height 8 feet. The roof has a one-quarter pitch. See complete specifications on Page 7.

A Letter from Virginia

Gentlemen:
The little house we bought from you last May is completed. Everything went together nicely. The material was much better than we could have bought here and you furnished plenty of everything. We are more than pleased with our little home. If we ever build another will certainly buy from you as we figure we saved around $200. We thank you for your kindness and fair dealings and will do all we can in the future to boost you.

Mr. and Mrs. J. E. Dickson.

REDWOOD No. 3

REDWOOD No. 4
ALADDIN BUILDING ESTIMATES

EXPLANATION OF FIGURES — The labor figures given below have been carefully compiled from data obtained from actual work under widely varying conditions, covering a period of more than twenty years. They are, therefore, average figures, for average work, by average workmen, under average conditions. The price of labor and the cost of materials are not the same in all localities. We are giving you figures from which the cost of construction can be determined fairly accurately by applying your own local prices for labor and materials.

EXCAVATION — Under the heading, "Excavation," we give the number of cubic yards of earth necessary to remove in an excavation of that depth. One-third of that amount will be the number of cubic yards in one foot of excavation. If your excavation will be less than three feet or more than three feet you can approximately determine the number of cubic yards of earth you have to excavate, by the depth of earth you are mining and the resulting figure will give you the number of cubic yards to remove in your particular case. Our figures are based on making the excavation one foot larger each way than the size of the foundation.

FOOTINGS — Under the heading, "Footings," we give you the number of cubic yards of earth necessary for a foundation wall 10 blocks high. As concrete blocks are 8 inches high, and 10 blocks wall is approximately 8 feet high. If a wall of different height is built, divide the quantities by ten and multiply by the number of blocks high your wall is to be built. If a cellar is not being built under your home, a seven foot wall will not be required. It will only be necessary to carry your foundation down below the frost line. This is seldom more than 2' to 3' below ground or grade line and in many localities is considerably less. Should you use 24" blocks the quantity of blocks required will be one-third less.

PLASTERING SURFACE — Under this heading we give you the number of square yards of surface in the home to be plastered and plastered. If wall-board, plaster-board, or some similar kind of material is being used in substitution of lath and plaster, the figures given will inform you of the quantity required.

CHIMNEYS — Chimney and fireplaces are sometimes shown on our plans to suggest a practical location. Since we do not cut the openings in our homes for them, you can change the location or omit them entirely if preferred. The amount of material required for chimneys is as follows:

One 8" x 8" flue chimney, 30 bricks to each foot of height.
Two 8" x 8" flue chimney, 60 bricks to each foot of height.
One 8" x 12" flue chimney, 60 bricks to each foot of height.
Two 8" x 12" flue chimney, 60 bricks to each foot of height.

NOTE: Mortar allow 1/4 bbl. cement and 1/2 cu. yd. sand for each 1000 bricks.

Aladdin Houses are sold in all parts of the United States and in Foreign Countries. Your local weather conditions and personal requirements will largely determine whether you will wish to purchase with your home any materials in addition to those included in our specifications listed on page 7. We are prepared to furnish additional materials and equipment as described and priced below, for any home.

Porches — Whenever possible Aladdin porches are quoted separately to permit buying the house without the porch or to enable you selecting a different porch from that shown on the house. The front steps are included in the price of the porch.

Cellar Windows — For wall opening 3 ft. wide by 2 ft. high, complete with frame, glazed sash and hardware $2.50 each. It is unnecessary to ship frames before the house, for by leaving openings 3'x2', the frames can be set in the foundation later.

Closet Doors — The numerous requests we have received for the omission of closet doors have induced us not to include them in our specifications but the door frame, or cased opening is provided. These openings can be artistically draped with color and attractiveness to the interior of the home and at the same time an economy is effected. If you wish closet doors you can purchase them separately at $3.50 each, including hardware. An illustration of the style of inside doors furnished with all Aladdin houses is shown on this page.

Special Doors — The outside front door furnished with many of our homes is a standard sash door with one light of glass about 24 inches square in the top. If the Aladdin home you select is provided with this design of door, it will show in the illustration. For other grounds are square strips, the thickness of lath and plaster to be used around all inside openings and also to back-up the base molding. They form a guide for thickness of plaster and are necessary for a smooth, satisfactory job. If you wish to line the interior with plaster-board, wall-board or some similar substitute to be secured locally, notify us and we will furnish ground and window jamb in proper widths.

Extra Windows — If extra windows are desired or if you wish us to replace single windows with double windows, write for prices.

Shutters or Blinds — Furnished for windows shown in illustration of house. Extra shutters can be furnished for any home for $3.00 per pair, including the necessary hardware.

Screens and Storm Sash — Screens and storm sash can be furnished for outside door and window openings. Write for prices mentioning house selected and stating what windows and doors are to be equipped.

Kitchen Cabinets — Aladdin kitchen cabinets are manufactured of clear stock, every piece fitted ready to assemble. Panelled doors open to shelves above, while below, a drawer is arranged over deep cupboard space, also equipped with doors. A sliding bookcase is over drawer. All hardware nickel plated. Cabinets are furnished in the natural wood to permit finishing the same as other kitchen woodwork. Cabinets are 7 feet 6 inches high, upper section 12 inches deep, lower section 22 inches deep. Cabinets can be furnished 2 ft. 6 in. wide for $16.50 each or 3 ft. 6 in. wide for $19.25 each.

Oak Flooring — Oak flooring can be furnished for any or all rooms of any Aladdin home providing sub-flooring is being used. If wanted write for prices. State in just what house and in what rooms you will wish to use it.

Asphalt Shingles and Asphalt Roofing — Green slate surfaced asphalt strip shingles are furnished with some Aladdin homes. They are hexagonal butt and self spacing. When roll roofing is included, see separate quotation for shingles on same page with house. Shingle prices do not include shingles for porch roofs. Due to the lesser slope of porch roofs, roofing is usually recommended.

Wall Shingles — Red Cedar shingles can be furnished for side walls at no extra cost providing wall sheathing is used.

Foundation Posts — We can furnish with your house shipment, wooden foundation posts 8 feet long at $1.00 each, or posts 4 feet long at 50 cents each.

Curved Plastered Arches — Square, cased openings are usually furnished between the living-room and dining-room. Curved plastered arches can be substituted on request, at no difference in price.

Cellar Stairway Addition — The addition shown at the right is 7'6" in size. If the Aladdin home is provided with a cellar stairway this addition can be used if a basement is desired. This can be added to the rear of any Aladdin home and includes steps to the kitchen and basement with grade entrance. Price of addition $71.00.
THE HURON
$899 And We Pay The Freight

Popular Inset Porch

THE HURON
Freight Paid Prices
The Huron $899
Sub Flooring, Wall Sheathing and Building Paper 128
Wood Lath 62
Asphalt Strip Shingles in place of roll roofing 50

It would be impossible to secure a better planned home in the size of the Huron. The Huron contains three large bed-rooms with closets, living-room, dining-room, kitchen and bath. And the price includes the 14' x 6' inset porch. The fireplace chimney can be omitted if desired, or its location changed, as we do not cut openings in Aladdin homes for chimneys or fireplaces. The Huron offers an opportunity to own a home at less cost than you thought possible. It is priced so low that your dollars will go far in comfort, warmth and lasting qualities. It is a genuine value. Of course, we guarantee everything will be exactly right and guarantee everything will reach you in perfect condition. With the Huron home you receive 6" x 6" built-up girders, 2" x 8" floor joists on 16" centers and 2" x 6" rafters on 24" centers. Ceiling height 8 feet. The roof has a one-quarter pitch. See complete specifications printed on Page 7.

Read This Letter From Indiana

Dear Sir:
We are more than pleased with our home and cannot say too much or praise it highly enough. The lumber and everything was just what you folks said it would be. It is all right with us to have people write or come to see the place. Today we had five look at it and three I am sure will get homes from you. People cannot understand how we put up such a lovely home for the amount it cost. As I said before, we cannot praise your lumber enough and everybody that comes here has to say the same thing. We figure we saved a Thousand Dollars by getting our home from you.

Wm. Struchen.

Materials Ready-Cut—Build It Yourself
Start Now! Save Rent!

The St. Clair is a big favorite and it can be purchased in your choice of two different plan arrangements. It is low in cost although the same high quality of materials are furnished with the St. Clair as for our largest homes. Aladdin's CERTIFIED lumber insure highest quality and sturdy construction. The St. Clair will be found warm and snug in coldest winter. The inset porch is included in the price. With the St. Clair home you receive 6" x 6" built-up girders, 2" x 6" floor joists on 16" centers and 2" x 4" rafters on 24" centers. Ceiling height 8 feet. The roof has a one-quarter pitch. See complete specifications on Page 7.
The Kenmoor — A Two-Story Bungalow — $1678 And We Pay The Freight

While distinctly a bungalow in type, the Kenmoor is a two-story house of liberal proportions. Notice the straight line dormer with exposed eaves in exact keeping with the eaves of the front porch—the extended bay window with roof and brackets, breaking the gable end. All rooms are well lighted. In fact, the Kenmoor contains twice as many windows as the usual house with the same number of rooms. The living room has seven windows, the dining room four and the kitchen three. On the second floor the front and rear bedroom each have four windows while the other bedroom has two. The rooms of the Kenmoor are all spacious. The living room with its 26 feet of expanse extending across the entire front of the home is perhaps the most noteworthy, but the large, well-proportioned dining room and kitchen also have much to commend them. Ascending to the second floor by the semi-open stairs at the end of the living room you enter a central hall from which easy access is gained to each of the three large bedrooms and bath. A roomy clothes closet is provided off from each bedroom. Our plan and illustration of the Kenmoor suggests a fireplace in the end wall of the living room. While this is an ideal location, the fireplace need not be built unless desired. We do not cut openings for chimneys or fireplaces in Aladdin homes. If the fireplace will not be built, the two small windows on each side can be omitted and a full-size window substituted at no difference in price. The Kenmoor is priced with siding on the walls but if cedar shingles are desired in place of siding as shown by the illustration, they can be furnished without extra cost providing wall sheathing is used beneath them. See our separate quotation on wall sheathing, sub-flooring and building paper as given below. The 26' x 8' porch is included with the Kenmoor at the price quoted. Asphalt strip shingles are furnished for the house and porch roofs. Because of lesser slope, roll roofing is supplied and will give best service on front and rear dormers. With the Kenmoor home you receive 6'x8' built-up girders, 2'x10' first floor joists on 16 inch centers, 2'x8' second floor joists on 16 inch centers and 2'x6' rafters on 24 inch centers. Ceiling height 9 feet first floor, 8 feet second floor sloping to 6 feet 6 inches at extreme front and rear walls. The roof has a one-third pitch with a 3 foot projection of eaves. See complete specifications on page 7.

The call of the wild—the urge of the great outdoors—can be answered with enthusiasm when one has an Aladdin Summer Cottage to go to.

Only high grade materials are furnished for Aladdin Summer Cottages. Clear and knotless bevel drop siding, knotless flooring, knotless partition material, knotless outside finish, etc., distinguish Aladdin Summer Cottages from the ordinary kind.

For instance, notice the style and thickness of our clear and knotless bevel drop siding as shown by full size drawing. This is unusual material, unusual high quality—and still our prices are low!

Immediately on receipt of your order we mail you a complete set of drawings, showing where every piece of material goes. You also receive a book of instructions and illustrations showing and explaining in a simple manner just how to build your cottage. Even if you are not experienced in carpenter work, You Can Build Your Own Aladdin Cottage.

Our price includes not only the materials but a large proportion of the labor—every piece of lumber in Aladdin Cottages is cut in our mills to its exact length, breadth and thickness—ready to nail in place on arrival.

All material for the erection and completion of your Aladdin Cottage will be on the ground at one time. Nothing forgotten nor overlooked. Summer cottages are usually built at places some distance from supply dealers. Orps back and forth are expensive. Your Aladdin Cottage arrives at destination complete—all lumber ready to nail in place—all windows, glass, doors, roofing, locks, nails, hinges, paint—in fact, everything.

In accordance with customary Summer Cottage Construction, the rooms are open to the rafters, and the studs on the inside of the outside walls are left exposed, exposing the smooth interior surface of the Knotless Siding.

Any Aladdin Cottage can be shipped and delivered to you in about one week after receipt of your order. In another week your cottage can be ready to live in.

When erected, the cottage is identical to one built by a contractor except that the material and type of construction is far better than the average.

Specifications for Summer Cottages—The Aladdin Company guarantees to furnish a sufficient quantity of materials to complete your summer cottage in accordance with the specifications listed below and further described in the reading matter concerning each cottage.

Quality of Materials—All lumber is guaranteed to be of high quality. Only Aladdin Certified Materials are furnished.

Girders or Sills—Built-up of 2" material to size specified on page showing cottage.

Floor Joists—Spaced on 24-inch centers, dressed and cut to fit. Size of joists specified on page showing cottage.

Studding—For walls, 2" x 4" placed on 24-inch centers, selected for quality and cut to exact length ready to be nailed into place. All walls have top and bottom plates which is the approved type of construction.

Wall Ties—Selected for quality, dressed and cut to exact length, ends mitered ready to nail in place.

Rafters—Placed on 24-inch centers and perfectly mitered and cut to fit. Size of rafters specified on page showing cottage.

Flooring—The flooring used in Aladdin Summer Cottages is Clear and knotless, tongued and grooved, accurately matched and milled to have a beautiful finish. It is what is known as "inch" flooring but when milled down is actually 5/8 of an inch in thickness. Cut in exact length ready to nail in place.

Siding—Clear and knotless bevel drop siding manufactured so it will have a perfectly smooth interior surface against the studs. All siding cut to exact length.

Partitions—Clear and knotless double-faced beaded ceiling held at top by grooved partition cap and secured to floor by quarter-round molding on each side. All openings cased to standard size so doors can be used if desired.

Roof Sheathing—Inch lumber to be laid tight. All sheathing dressed, cut to exact length and ready to nail in place.

Roll Roofing—Made of heavy weight felt base, saturated with asphalt and surfaced with natural green slate firmly imbedded in the heavy water-proof base.

Outside Finish—Such as corner boards, window and door frames, moldings, etc., manufactured of clear and knotless stock.

Window Sash—Manufactured of knotless stock. Glass in sash ready to hang. Windows check rail type, size of glass in each sash, 26 x 24 inches, with a few exceptions where a smaller window is required to carry out the proper effect.

Outside Doors—Clear and knotless, mortised for lock sets, glass placed in them, ready to hang.

Porches—The price quoted for each cottage includes the porch. Screens quoted separately on Page 62.

Points—Two coats furnished for exterior only. We have used unusual care in the manufacture of our paints for the appearance of your cottage depends to a great extent upon the quality of the paint.

Hardware—Frosted brass finish lock sets, 31/2" butts for doors, spring window bolts for all check rail windows, casement locks and hinges for swinging windows, nails of all sizes in proper amounts to complete the cottage.

Blue Prints—Drawings and a book of instructions showing every step of erection are furnished so that even though you may not do carpenter work you will know just how to erect your cottage.

Reversing Plans—Plans can be reversed without charge. This will place all rooms on opposite side of house from that shown.

Freight Paid—See page 4.
The Willows
This Seven
Room Cottage

$834
FREIGHT PAID

The Willows contains every detail for summer comfort. Note the large porch that extends across the entire front of the cottage. This porch provides many comforts during vacation life. The high ceiling in living room gives you plenty of light and air and with the balcony above you have a very pleasing effect for the interior. This cottage can be furnished having an extra bedroom making five in all as the dining room can be used as a bedroom. The present living room could then be a combination living and dining room. Although the Willows is not a large cottage it is surprising the amount of room in it. The four bedrooms, living room, dining room and kitchen are of ample size for all practical needs. The bearing partition which divides the living room from the kitchen, dining room and bedroom is built up of 2" x 4" studding on 24-inch centers. Clear matched ceiling is furnished for one side of this partition. The balance of the partitions are standard matched ceiling partitions having the partition cap on the top and moulding on either side at the floor. The sills are 4" x 6" built-up. The floor joists both first and second floors are 2" x 6" on 24-inch centers. The rafters are 2" x 4" on 24-inch centers. The first floor partitions are 7'6" in height, second floor partitions 7'2", rear wall second floor bedrooms 6'6" at lowest point.

The Bay View

This beautiful little cottage will fit in any summer resort colony as it is attractive and well designed. It is offered in three different plan arrangements and sizes, each having a large porch across the front and a very convenient porch at the rear. These porches are included in the price quoted for the cottage. The materials are cut to fit thus making it possible for you to build it yourself without the slightest difficulty as thousands of other happy Aladdin home and summer cottage owners have done.

Only the best of materials are furnished with Aladdin summer cottages as you will note by referring to the specifications on Page 54. The sills, three in all, are built-up, size 4" x 6". The floor joists are 2" x 6" on 24-inch centers. Wall studding 2" x 4" on 24-inch centers. The rafters are 2" x 4" on 24-inch centers. The height of interior partitions is 7'6".

Plan No. 1
Plan No. 2
Plan No. 3

See Specifications Page 54.
**The Luna**

From the standpoint of good architecture, splendid room arrangement and comfortable accommodations, the Luna is a summer home of superior qualities, yet it can be erected at a low cost. It is large enough for the average family. The space over the front porch can be used for storage as the porch is ceilled overhead. This storage space is very desirable in a summer cottage. Plan No. 1 has three bedrooms, big living room and kitchen. Two men have built and finished the Luna No. 1 in five days. The porch is size 22' x 8'. Plan No. 2 provides a splendid size living room, a kitchen and three good bedrooms. The dimensions of the Luna No. 2 will permit this cottage to be built on a narrow lot. The Luna No. 3 contains three bedrooms, living room, kitchen and large porch. The Luna No. 6 is a big, roomy cottage with four bedrooms, living room and kitchen. The big living room and porch permit the entertaining of many friends at one time. The Luna has 4' x 6' built-up sills. The Luna No. 1, No. 2 and No. 3 have 2' x 6' floor joists on 24-inch centers. The Luna No. 6 has 2' x 8' floor joists on 24-inch centers. The rafters are 2' x 4' on 24-inch centers, the eaves are the exposed type. The height of the interior partitions is 7'6". See specifications Page 54.

Spend the first few days of your vacation building your own Aladdin Summer Cottage. It's Fun, Easy and economical. Readicut materials and the instructions we furnish make construction fast, simple and accurate.

See Specifications Page 54

---

**The Statler**

The Statler is a substantial, comfortable summer home, and is shown here in three different plan arrangements and sizes. The Statler No. 1 is size 20' x 18' over-all having three bedrooms and combined dining room and kitchen. The Statler No. 2 is size 20' x 22' over-all having living room, two bedrooms and kitchen. The porch is 20' wide and 6' deep. This plan is one of our best sellers. The Statler No. 3 is size 18' x 24'. It is a popular type affording maximum room for its dimensions. The sills are 4' x 6' built-up. The floor joists are 2' x 6' on 24-inch centers. The rafters are 2' x 4' on 24-inch centers. The height of the interior partitions is 7'6". See specifications Page 54.
THE OCEAN PARK is an unique design and something out of the ordinary in summer cottage architecture. Some fine features are incorporated in the five Ocean Park plan arrangements that will attract folks desiring the utmost comfort in a summer home. The main roof extends over the porch in each design, giving greater ventilation area inside and a place for storage as the porch is ceiled overhead. Plan No. 1 is a two bedroom arrangement, and is priced astonishingly low. Plan No. 2 is the same width but contains three bedrooms and rooms of larger proportions. The Plan No. 3 arrangement contains the inset porch and also two closets. Plans No. 4 and No. 5 are conveniently arranged, one having a large living room and dining room, the other having three bedrooms. The sills are 4" x 6" built-up. The floor joists are 2" x 6" on 24-inch centers. The rafters are 2" x 4" on 24-inch centers. The interior partitions are 7½" high. The roof is one-quarter pitch with exposed eaves. See specifications Page 54.

THE SHASTA Three sizes and plans are shown for the Shasta, one of our most popular summer cottages. Over-all dimensions of Plan No. 1 are 24' x 24', porch, living room, three bedrooms and kitchen make up a very complete cottage. Plan No. 2 is 28' x 26' over-all. Note the porch size 28' x 8'. The interior affords a fine living room, three bedrooms and kitchen. Plan No. 3 is size 36' x 30' over-all. A splendid summer cottage of the larger type. The sills are 4" x 6" built-up. The floor joists furnished for the Shasta No. 1 and No. 2 are 2" x 6" on 24-inch centers and for the Shasta No. 3 are 2" x 8" on 24-inch centers. The rafters are 3½" x 4½" on 24-inch centers. The height of the interior partitions is 8½. See specifications Page 54.
The Rustic
This Ten Room Cottage

$1267

FREIGHT PAID

The Rustic follows the general lines of Colonial bungalow architecture, which is having great popularity just now. This type is an entirely new feature in Aladdin summer cottages—larger than we have previously shown. There has been a demand for an architecturally attractive summer home of larger accommodations. Six splendid bedrooms afford hospitality for family and friends. Generous sized living room and dining room, big kitchen and convenient rear porch afford ample conveniences for the most exacting demands. The built-up sills, three in all, are size 6' x 8'. The floor joists are 2' x 8'—16-inch centers. The studding furnished for the outside walls is 2' x 4'—16-inch centers. The interior of all outside walls is supplied with clear matched ceiling lumber from the floor to the top of the plates, or the height of the inside partitions. The height of the inside partitions is 9'. On this particular design we furnish 8" Colonial Siding. All windows are equipped with sash weights, locks, sash cord and pulleys. The roof has exposed eaves and is one-quarter pitch. The rafters are 2' x 6" on 24-inch centers. The purchaser of the Rustic cottage can be sure of obtaining an unusually attractive cottage and one that will compare favorably in size and appearance to cottages costing twice as much.

See Specifications Page 54.

The Lakeside

The joy of living in the great open country is increased a thousand fold if one has a summer home to go to like the Lakeside. In a cottage built of highest quality materials and sturdy construction you can know that you and your guests are comfortably housed. The Lakeside which is furnished in three different plan arrangements is not only a thing of beauty in any vacation spot but it is also a summer home of great comfort and convenience. Plan No. 1 contains three bedrooms. Two of these bedrooms are provided with a convenient closet. This plan arrangement also contains a bathroom. At the rear door, space is provided for an ice box. Plans No. 2 and No. 3 each contain four bedrooms and are of the same general arrangement although Plan No. 2 has a rear porch and dining room where in Plan No. 3 this space is used for the bathroom and ice box. The sills are built-up, size 4' x 6'. The floor joists are 2' x 8' on 24-inch centers. Wall studding is 2' x 4' on 24-inch centers. The rafters are 2' x 6' on 24-inch centers. The height of the interior partitions is 7'6".

THE KNICKERBOCKER

FREIGHT PAID $1495

This ten room summer home is more pretentious in size and appearance than the general run of summer homes. It has qualities which make an instant appeal to those needing a large summer home. Think of a summer home with seven bedrooms! In addition, there is a living room, dining porch and a kitchen. Toilet, bath and closet spaces are provided for generously. This fine home erected at one's favorite vacation spot would assuredly add much to the enjoyment of vacation life. The built-up sills are size 6' x 8'. The floor joists are 2' x 8' on 24-inch centers for both the first and second floors. The studding is 2' x 4' on 24-inch centers. The interior partitions for the first floor are 9' high and for the second floor 8'6" high. The first floor partitions are 2' x 4' studding with clear-matched ceiling on one side. All four walls in living room are furnished ceiling. The partitions on the second floor are the standard matched ceiling partitions. The rafters are 2' x 6' on 24-inch centers. The roof has a 5/12 pitch with exposed eaves.

See Specifications Page 54.

THE ROCKWOOD

The Rockwood is a simple, comfortable summer cottage. It is provided in three different plan arrangements giving you the most complete and comfortable summer cottage living quarters that it is possible to have at the exceptionally low cost at which this cottage is sold. We have found from experience that this type of good, substantial summer cottage affords precisely what the average American family wants. The sills are 4" x 6" built-up. The floor joists are 2' x 6' on 24-inch centers. The rafters are 2' x 6' on 24-inch centers. The roof has a one-quarter pitch with exposed eaves. The height of the interior partitions is 7'6".

See Specifications Page 54.
The Seaford

Among the large types of summer homes, the Seaford stands out for the many unusual qualities it possesses. The Seaford Plan No. 1 has three bedrooms, living room, kitchen, and a large porch. 29' x 6', completes this fine type of summer cottage. The Seaford No. 2 is a decidedly popular plan, a three bedroom design with a very convenient porch arranged at the side of the kitchen. The Seaford No. 3 has an exceptionally large porch, ten feet deep, and six rooms. Remember, we can rearrange the partitions in any summer cottage to meet your needs. The Seaford No. 4 is now arranged with two bedrooms but if you prefer an extra bedroom the present dining room can be used as a bedroom, giving you three bedrooms in this plan arrangement, or by omitting the partition between the living room and dining room a living room across the entire front of the cottage can be had. The Seaford No. 5 is a four bedroom plan and will accommodate eight people with permanent sleeping quarters. The Seaford Cottage has 4' x 6' built-up sills. The joists are 2' x 6' on 24-inch centers. The rafters are 2' x 4' on 24-inch centers. Roof one-quarter pitch. The height of the interior partitions is 7'6".

See Specifications Page 54

The Asbury

is a cozy summer cottage of pleasing lines. The porch can be screened-in to give an outdoor living room. The Asbury No. 1 is the smallest Aladdin Cottage. It has a living room and bedroom and it’s just as well built as our larger cottages. The Asbury No. 2 is 4' deeper and has three rooms. It’s a cute little cottage for the modest demand. Plan No. 3 size over all, 16' x 22'. The Asbury has 4' x 6' built-up sills, the joists are 2' x 6' on 24-inch centers. The rafters are 2' x 4' on 24-inch centers. The height of interior partitions is 7'6". The roof has a one-quarter pitch.

See Specifications Page 54
THE GENESEE

The Genesee is a strikingly good looking summer cottage and it is shown in three well planned arrangements. The Genesee No. 1 is 24' x 22' over-all and contains a generous porch, living room, three bedrooms and kitchen. You will note that there is plenty of light and air in this cottage. It has a straight gable roof with one-quarter pitch, and exposed eave projections. The full width of the cottage is utilized for a front porch. The Genesee No. 2 offers a unique arrangement of rooms having living room and two bedrooms facing the front of the house. Kitchen and front and rear porches complete the plan. The Genesee No. 4 will attract you because of the wide expanse of living room across the front of the cottage. Some builders omit the partition between the living room and dining room and then use the end of this enlarged room for dining purposes. By making this change you have a living room 30' long which of course is very desirable in a summer cottage. Three bedrooms and kitchen complete this plan arrangement. The sills are 4' x 6' built-up. The joists are 2' x 6' on 24-inch centers. The rafters are 2' x 4' on 24-inch centers. The height of the interior partitions is 7'6". See specifications Page 54.

THE SHOREVIEW

Is furnished in four popular sizes. Any one of them can be built on a very narrow lot. The Shoreview No. 1 is a snug little layout of four rooms and porch. It is conveniently arranged and good looking, too. The other arrangements are very well planned and give you the most in comfort and convenience. The sills are 4' x 6' built-up. The floor joists are 2' x 6' on 24-inch centers. The rafters are 2' x 4' on 24-inch centers and the roof has an exposed eave. The height of the interior partitions is 7'6". THE HUNTER'S LODGE

Freight Paid Price $173

The Hunter's Lodge answers the demand for a low cost camp or "shack" in the woods. Two men can start work on the erection of the Hunter's Lodge in the morning and sleep in the completed building at night. It is a one room building and can be purchased in your choice of two sizes. The Hunter's Lodge No. 1 is 12' x 16' in size. The Hunter's Lodge No. 2 is 12' x 20' in size. There is ample room in either the Number 1 or the Number 2 size of the Hunter's Lodge for bunks to accommodate four sleepers. These can be built up across the rear or sides or you can use double decked steel bunks or cots. We use on the best materials in Aladdin homes and summer cottages and furnish these same high quality materials for all Aladdin buildings, regardless of their size or cost. Due to the fact that the heavy, close fitting siding described on Page 54 is furnished with the Hunter's Lodge, you will find the building easy to heat in the late fall months. The Hunter's Lodge contains a total of four 18" x 24" swinging casement windows, two being arranged in each side wall. A paneled door is furnished at the front. The specifications are listed on Page 54.

ADDITIONAL MATERIALS FOR SUMMER COTTAGES AND GARAGES

Specifications listing the materials furnished with Aladdin Summer Cottages will be found on Page 54. You can note that in accordance with usual practice and custom, we furnish or supply the necessary materials to make the frame, high quality galvanized screen doors, windows and screen porch. We therefore furnish materials from the sills up, only.

SCREENS: At the following prices we can include screens with any summer cottage shipment. The prices include full length galvanized wire screen and necessary hardware for screen doors, window screens and porch screens.

Asphalt Strip Shingles: Almost all summer cottages and garages are built with slate-surfaced asphalt roll roofing for the roof covering. For this reason Aladdin Summer Cottages and Garages are priced with roll roofing. However, we occasionally receive inquiries to substitute green, slate-surfaced, asphalt strip shingles for the roll roofing and we therefore quote the following prices on making this change in our specifications.

Asphalt strip shingles are not quoted for the roof of the La Salle garages for, due to their very low pitched roofs, roll roofing is the only practical roof covering. With the La Salle garages we furnish a special, extra heavy, deck roofing which cannot be improved upon.

Foundation Posts: Cedar posts can be furnished for Aladdin Summer Cottages at $1.00 each for 8-foot posts or 50 cents each for 4-foot posts. The length of posts necessary depends upon the height above ground the cottage will be built. If the lot slopes, it will probably be necessary to use some long posts. If you wish us to include posts with your cottage we will be glad to inform you of the number necessary.

Fifteen different designs of summer cottages are pictured in this catalog. Most of these cottages are offered in several plan arrangements, making a total of forty-four different sizes or plans for you to select from. In this large assortment of plans it is probable that you will find just exactly the room arrangement you desire. However, we may still be interested in knowing that our summer cottage partitions can be moved about during construction, practically at will, making it easily possible for you to rearrange the plan or alter room sizes if you wish to do so. We can sell you extra windows, etc., to assist you in making your cottage just exactly as you want it. As an example of the changes possible, some of our customers have desired to place the outside entrance to the Hunter's Lodge or Tourist Cottage in the long side of the building, facing it the wide way to the front. This change and many other similar changes can be handled without difficulty.
TOURIST COTTAGE—$90
ROADSIDE STORE—$96

And We Pay The Freight

Build these Aladdin Money Makers and you will have a fine income. A few hours time will complete one, all materials Readycut.

The demand by tourists for safe and comfortable sleeping quarters, outside of hotels, has initiated the idea of over-night cottages and created a plan that will both serve the tourist and make profitable investment for the owner. There is ample space across the rear of the Tourist Cottage so two double bunks can be installed one over the other, giving sleeping accommodations for four people. A splendid income, in addition to the nightly rental of the cottage, will come in from the sale of supplies from the Roadside Store. The end of the Roadside Store is arranged to open up as shown in picture.

Specifications: In general, the specifications for our summer cottages as printed on Page 54 apply. Both the Roadside Store and the Tourist Cottage are one room buildings, 7' x 12' in size. Both contain one swinging casement window in each side wall, size of glass 18" x 24". Both contain one outside door with glass in the top section. The price quoted for the Tourist Cottage includes screen door and window screens, with hardware. Shelving is furnished for the Roadside Store. Asphalt strip shingles can be furnished for either building in place of roll roofing for $6.00 additional.

THE HILL FILLING STATION $369
And We Pay The Freight

Carefully designed to give proper clearance for autos and pumps. Attractive in appearance and easy to build.
The Hill Filling Station being ready-cut can be erected by anyone who can drive nails. The enclosed section of the filling station is one room, 16' x 10' in size, and the open section, covered by the same roof, is 16' x 12' in size. As the illustration shows, two large windows and a door are furnished for the front wall. One small window is furnished for each of the two end walls.

Specifications: Exactly the same high quality of materials is furnished as for our regular houses. General specifications as printed on Page 7 apply. The Hill Filling Station is furnished with 4" x 8" girders and with 2" x 6" floor joists on 16-inch centers, so constructed as to give ample strength for oil barrels, etc. The ceiling height is 9 ft. 6 in. It has a one-quarter pitch hip roof and exposed eaves with a 1 ft. 3½-in. projection. The front columns are provided for the two corners of the open section, as shown in illustration. Matched ceiling is furnished for the ceiling of the open section. Sub-flooring, wall sheathing and building paper can be furnished for $37.50 additional. Wood lath can be provided for $11.75. If asphalt strip shingles are desired in place of asphalt roll roofing, the change can be made for $22.00.

THE VALLEY FILLING STATION—Freight Paid Price $375
A Real Service Station. Low in cost of materials and labor.
The Valley Filling Station is a good investment. It provides a neat building of attractive appearance and is practical in size. The floor plan below shows the plan to include two toilet rooms, both opening from the outside of the two rear corners. These entrances are screened by lattice fence which is included in the price.

Specifications: General specifications on Page 7 apply. Furnished with 4" x 8" girders and 2" x 6" floor joists on 16" centers to give ample strength for heavy storage. Ceiling Height 8' 6". Roof 3½ pitch. Rafters 2' x 4' on 24" centers.
Aladdin garages are made of only the best materials and when completed are sure to please the most critical person. The lumber is entirely cut-to-fit, making erection a short and easy task. Detailed drawings show where each piece of lumber is to be placed and nailed. Aladdin offers the perfect system of buying and building garages. All freight charges paid by the Aladdin Company. Safe delivery and no shortages guaranteed.

Specifications: Materials of the same high quality as used in Aladdin houses. Sills 4" x 4", studding 2" x 4" on 24-inch centers. Clear and Knotless drop siding for side walls; see illustration of siding on page 54. 2" x 4" rafters on 24-inch centers, roof sheathing laid tight. Best quality green, slate-surfaced, roll roofing. Slate surfaced asphalt strip shingles can be had in place of roll roofing at prices quoted on page 62. Swinging doors, each pair eight feet wide and seven and one-half feet high, except Ford No. 1 doors 7'4" wide 7'3" high, Ford No. 2, 3 and 4 doors 8' wide, 7'3" high. Garages shown with solid doors can be supplied with glass top doors at $8.00 per pair additional. Windows furnished when shown in illustration are swinging casements. Hardware for doors and windows, nails and two coats of paint for exterior. Materials Ready-Cut. Drawings and instructions for building. All garages furnished without floors as most owners prefer to build floors of cinders or concrete.

ALADDIN Houses Built 20 Years Ago
Sold Recently at Handsome Profit

To sell an Aladdin house today that was built twenty years ago and make a profit on it of seventy-five per cent settles conclusively the question of genuine built-in strength, quality and all around value.

One of our customers of twenty years ago wrote us recently that the two Aladdins he built at that time had been rented constantly through all those years, and that he had just sold them. He reports that the two houses, together, cost him less than a thousand dollars. When he sold them he received $1,750.00. That is a profit of more than $750.00, besides the rent received during all the time he owned them.

What finer tribute to Aladdin Homes could be given? You can build an Aladdin with confidence that it will give you complete satisfaction now and through all the future years that you own it. We give Mr. Moore's letter below:

New Egypt, N. J.
March 24, 1931

Gentlemen:

As a user of your great Aladdin building plan, having built two of your little bungalows here in New Egypt about twenty years ago, costing me less than a thousand dollars for the two, and rented them through these years, then sold them for $1750.00, I feel you should be recommended to others. Please send catalog to list of names following.

(Signed) ADDISON U. MOORE.

ALADDIN Gives You More for Every Dollar

Aladdin gives you much more for your money because: You avoid paying profit and markups to several middlemen. You buy direct from the manufacturer—direct from Aladdin Mills. The average dealer's price to you, because of these several profits and expenses, is about twice the price the lumber mill gets for its lumber. It's the same lumber whether at the saw mill or in the dealer's yard. You make further savings because the Aladdin Readicut System saves 18 per cent hand cutting on the site of your building. You pay the lumber dealer the same price per foot for all the lumber wasted in your house as you pay for the lumber actually used. This is a waste on the job when you build an Aladdin. You also save about one hour out of every four hours labor building your Aladdin because the materials are manufactured and cut to fit in Aladdin Mills.

ALADDIN Helps You Build with Absolute Confidence

Because The Aladdin Company originated and developed the Readicut System of Construction; because the Aladdin Company built thousands of Readicut homes to the public for twenty-six years; because The Aladdin Company is the largest exclusive manufacturer of Readicut-houses in the world; because The Aladdin Company guarantees your satisfaction or your Money Back insures you against most home builders' troubles; because the same men who started the company twenty-six years are still owners of the company and still its actual managers—you can build your home with feelings of complete safety, satisfaction and security.

If anybody says he will furnish the materials for an Aladdin house at the same or less money than the Aladdin price, MAKE HIM sign an iron-clad agreement to refund his money when his house is put down and he continues until the complete house was analyzed and every item was accounted for.

They then totaled up all the prices and the result was a price over three hundred dollars higher than Aladdin's price for the complete house.

HE WOULD NOT SIGN

"Will you sign an agreement to furnish me a house in accordance with the price you quoted before you sold under Aladdin's price?" asked the customer.

"I will not," answered the dealer—and he didn't.

The above experience was related to our general manager recently, by the man who went through it, and who afterward purchased and erected our Cypress in Muskogun.

WARNING!

The customer discovers first one item, then another, until every item is missing. When he approaches the dealer with a request that they be put down to the job, he is advised by the dealer that those items were not included in the price quoted.

The customer has no redress for he has no signed agreement from the dealer to furnish all materials to complete the house.

HERE'S THE RESULT

The result of it, of course, is that he has to order the missing items from the dealer and PAY FOR THEM AS EXTRAS—AT DEARER THAN HIS OWN PRICE!

Home builders who have told us about these experiences almost invariably say they would have saved several hundred dollars more than they could have bought high grade KNOTLESS materials from Aladdin for.

Such an attempt was made recently by a Muskegon, Michigan lumber dealer on one of our prospective customers. This customer learned nothing about construction, and when the dealer quoted a price $70 under our price on our Cypress in Muskogun, the customer said:

"That's a good price. Let's sit down and figure it out, it will figure the exact footage of all lumber, the amount of millwork, doors, windows, roofing, paint, nails, hardware—everything.

With reluctance on the part of the dealer, they proceeded to the figuring. As each item was figured, the price kept on going down and down and they continued until the COMPLETE house was analyzed and every item was accounted for. They then totaled up all the prices and the result was a price over three hundred dollars higher than Aladdin's price for the complete house.

"I will not," answered the dealer—and he didn't.

The above experience was related to our general manager recently, by the man who went through it, and who afterward purchased and erected our Cypress in Muskogun.

ALUMINUM PAINT—THE COAT OF METAL PROTECTION

Alcoa Albron, manufactured by Aluminum Company of America and sold under the above trade mark, is the pigment portion of the aluminum paint used for mill-priming our lumber.

ALADDIN'S Protecting Coat of Aluminum—Sheds Water Like a Duck's Back

Buyers of Aladdin Homes in the past have recognized the quality of our Clear and Knotless bevel siding and outside finish. But now our siding is coated on four sides with Aluminum, which represents one of the greatest advances in the perfecting of building materials.

It gives you the opportunity to use siding and outside finish protected with a metal coat of Aluminum.

You never thought of giving the siding a first coat before you used it, because of the cost. Done on a production basis at our mills, with automatic machines, this cost has been cut to a minimum—so low in fact that you actually save money—nearly 50% of your painting labor and at the same time have a home that will require painting less often in the future. The finishing coat of paint will last much longer when applied over a coat of metal protection that seals the wood against moisture and prevents warping and checking.

Metal Protected Wood Defies the Elements

ALADDIN HOUSES Make Happy Homes
Announcing ALADDIN'S
Newest Achievement!

ALUMINUM
PROTECTED
LUMBER

Greatest Single Advancement in
Home Building Since Our Creation
of the Readi-Cut System

Aladdin announces an amazing advance in
house construction methods. It is sur-
passed in importance only by the great cost
lowering achievements of the Readi-cut
System itself. Your Aladdin will be sheathed
with a coat of Aluminum. All siding and
outside finish exposed to the weather will
have a metal coat of protection. This forms
the strongest known protection against the
ravages of weather, dampness, age or other
damage. It also forms a perfect undercoat
for our high quality paint. It gives the
most perfect protection to our Certified and
Guaranteed Knotless Siding and Knotless
Outside Finish. Special machinery has been
installed in Aladdin mills for blowing Alu-
munum under pressure into the fibres of the
wood on all four sides of our Knotless
Siding.

To own a home, having the protection, value
and benefits of the latest scientific accomplish-
ments, is a matter of pride and satisfaction.

To be one of the first in your community to
own such a home is a distinction and is evidence
of leadership.

The silvery flash of the Aluminum metal coat,
as your home is under construction, gives notice
to the world that here is a home different, sounder
and more distinctive than any home around you,
regardless of size. It gives notice that here is a
home whose every board, which is exposed to the
weather, is covered with a coat of metal protec-
tion.

With these advantages comes the knowledge
that nearly half of the cost in labor and money
of painting is saved. There is no danger from
rains during construction—causing delay in prim-
ing because of dampness. Rain will not affect this
material either before or after construction. An-
noyances and delay from bad weather are wholly
avoided. All these advantages give greater speed
in erection and save time and labor.

Ultra-Violet Ray Health Glass
For All Windows in ALADDIN Homes
Newest Scientific Advancement in Window Glass
Adopted by the ALADDIN Company This Year

Sunlight travelling through almost countless miles of space—from sun to earth—in just eight minutes, so scientists say, brings to us the light, heat and health rays so necessary to life and happiness.

Yet, the shorter ultra-violet rays, the very best and most healthful part of sunlight are stopped and held out of your home by ordinary window glass.

Lustraglass is a new glass. It has no equal. It is not "ordinary window glass." Lustraglass is a perfectly flat glass of brilliant lustre, the "whitest" of all glass made for windows and transmits more daylight as well as more ultra-violet rays than ordinary window glass. No other glass combines all these features. Lustraglass has no "equal" because no other glass is just like it.

To see the different results between ordinary window glass and the new ultra-violet ray window glass that will be furnished with your new Aladdin Home, look at the illustration on this page. A prominent university, famous for its horticultural experiments, has been conducting a series of carefully recorded hotbed tests to determine the exact value of Lustraglass, the ultra-violent ray window glass, over ordinary window glass. The illustration shows the results obtained by these experiments on Spinach.

Note carefully not only the difference in height of the two plants but the difference in stockiness and there was also a great difference in the color of leaf. The report states that color of leaf, Lustraglass—deep green. Color of leaf, Ordinary Glass—paler green.

The ultra-violet rays of sunlight are conceded to be of great value to all forms of life. Lustraglass transmits more ultra-violet rays, more daylight, and, at the same time, is the "whitest" of all window glass and superior in appearance to all other window glass. It should be the glass in your new home.

Aladdin engineers are always looking for the best and newest ideas in home construction, therefore Lustraglass, the new ultra-violet ray window glass will be supplied in your new Aladdin Home.

HOW THE COAT OF METAL PROTECTION IS APPLIED

This marvelous automatic machine blows aluminum into the wood fibers at the astonishing speed of two hundred linear feet a minute—on all four sides of the board. The application of the aluminum is actually controlled by a beam of light—called the Electric Eye, a new scientific device developed by the scientists of the Westinghouse Electric Company and which is finding increasing use in the most modern manufacturing plants. Because this magic-like machine applies the coat of aluminum before your house leaves Aladdin Mills, you are saved the labor and time of painting the first or priming coat of paint on your siding when your Aladdin house is erected.
